# Quick Connect Couplings

# CUPLA

### Cuplas Enable Flexible, Fast, and Secure Connections in Various Fluid Lines.

### Nitto Kohki's unique technologies and dedicated research have been proven by numerous patents, which led to the development of 25,000 different Cupla variations.

Applications diversify from general household to high-tech industries such as in oceanic and space development.

Numerous sizes are available for various needs.

Wide varieties of body materials such as steel, brass, plastic, aluminum or stainless steel are available.

For easy replacements:	Replacements of pneumatic / hydraulic tools, pneumatic / hydraulic cylinders, mold attachments, etc.
For temporary installation in test line:	Vacuum tests, pressure durability tests, leakage tests, running tests, etc.
For filling:	For filling up various industrial gases, including inert gases, nitrogen, LPG, carbon dioxide, oxygen, fuel gas, etc.
For maintenance services:	For computer cooling system, hydraulic cylinders in die-casting machines.
For transfer:	For transfer of solid items through pipes such as screws and nuts as well as for electric power cable lines.
As joints:	Applications other than fluid transfer covering connections for holding works while anchored or carried around.

# A profusion of patented technology crystallized in global users recognition of high quality and high performance.

#### ISO 9001 and 14001 Certification Award

"Cuplas" quick connect couplings are produced as the crystallization of high-grade know-how nurtured in the fields of fluid engineering and materials engineering, and top level precision machining technology. Having assessed Nitto Kohki consistent quality assurance and control system ranging from design and development through procurement of material, manufacture, assembly, and shipping, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded us "ISO 9001", international standard for quality management systems, and "ISO 14001", international standard for environment management systems intended to perform global environment preservation and pollution control. High reliability built on unparalleled "high quality" and accumulated history of "productivity" for stable supply. Cupla is receiving overwhelming support from many users spread all over the world as the top brand for fluid energy transmission and control.

### ightarrow Beware of imitations

Recently on the market, there have appeared similar products that invite misidentification or confusion with Nitto Kohki Cuplas, or such products that claim to have compatible mating parts. Nitto Kohki cannot accept responsibility for any accident that may result by mixed use with a coupling of another brand that seems connectable to a Nitto Kohki Cupla. Nitto Kohki Cuplas are produced with their own unique tolerances and precision under strict quality control, and are not interchangeable with other couplings that are not under such tolerances. Therefore, connection to other brand of coupling may end up with abrupt breakdown or personal injury. Please be sure to check for our marks below, which are always inscribed on Nitto Kohki Cupla products, when you order and purchase.

# Select an Appropriate Cupla for the Job

Nitto Kohki has the wide range of Cuplas covering almost every application and feature you need. In order to select an appropriate Cupla for your job, you need to realize the following specifications.

#### **Specifications to Be Checked When Selecting Cuplas**

Fluid and the Temperature	Select a Cupla with body and seal materials that suit the fluid and its temperature.	There are different body and seal materials to suit different fluids. For example, we recommend steel Hi Cuplas for air, and brass or stainless steel for water. Please refer to Body Material Selection Table and Seal Material Selection Table at the end of this catalog for details about the correspondence between fluids and materials.
Fluid Pressure	Select a Cupla suitable for the actual max. fluid pressure.	Fluid pressure is also a key to Cupla selection. Each series of hydraulic Cuplas have different structures to cope with each pressure resistance ranges between 5.0 MPa (50 kgf/cm <sup>2</sup> ) and 68.6 MPa (700 kgf/cm <sup>2</sup> ).
Automatic Shut-off Valve	Select a Cupla with a valve structure that suits the piping application.	Valve combinations are two-way shut-off, one-way shut-off, or straight through types. Choose carefully. Unless it is a two-way shut-off type, the internal fluid will flow out from the Cupla without valve when it is disconnected.
Operating Environment	Select a Cupla with design and materials that suit each operating environment.	In choosing the type of Cupla, body material and seal material, consider the temperature range, possible dirt and dust, and/or corrosive atmosphere in the operating environment.
Size and Type of End Configurations	Finally and critically specify the size and type of end configurations.	Having checked the type and materials for the Cupla, now specify the size and type of end configurations to suit the type of piping. Choose carefully, as the size affects the fluid flow rate.

If you cannot find a suitable Cupla, please enter the above details in the "Cupla Inquiry Form" at the end of this catalog and send it to our distributor in your country or directly to Nitto Kohki by fax or post.

#### **Symbols**

Quick reference symbols: 1) Type of valve structure, 2) Working pressure, 3) Applicable fluids, are given on each product page to help you to quickly select a suitable Cupla. Please use them as the guide to grasp each type selection.

Two-way shut-off (Non-Spill)

Socke

**One-way shut-off** 

Straight through

#### Working pressure

Applicable fluids

Oxygen, **Fuel Gas** 

Heated oil

Solvent based paint

Steam

Gas

Inert gas, Vacuum, Helium

High purity chemicals

The following terms are used in detailed information pages of Cuplas. Refer to these terms when checking Cupla specifications.

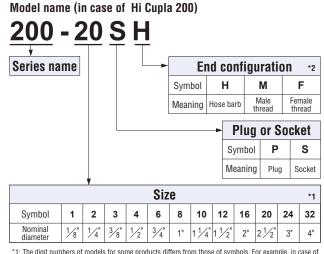

International System of Units (SI Units)

Every unit stated in this catalog is based on SI Units. The old units, which are Non-SI Units, are also written within parentheses side by side with SI Units for reference only.

#### Glossary

#### The Meaning of Each Letter in the Model Name

The model name of a Cupla indicates its size, whether plug or socket, and the end configuration. Rated pressure is also shown for some hydraulic Cuplas. Check the following tables to understand the model name implication before making your selection.

\*1: The digit numbers of models for some products differs from those of symbols. For example, in case of Hi Cupla 20SH, not "20" but only "2" of the "20" corresponds to "2" of the symbol and indicates the nominal diameter of 1/4".

\*2: For a product with only one type of end configuration, this symbol is omitted. For example, 210 Cuplas have only female threaded end so the model indicates only the size and plug or socket identification.

#### Body material

This indicates the material that is used for the plug body or socket body that forms the flow path of fluid through the Cupla. Some products have internal components of a different material. Please check with us for details.

Body N	laterial	Major applicable fluid
Common name	Mark	
Brass	BRASS	Air, Water, Oil
Iron, Steel	STEEL	Air, Oil
Stainless steel	SUS	Air, Water, Oil

Please refer to Page 144 for body material selection table.

#### Size

This indicates the nominal size of the pipe thread connection or of the hose to be used.

#### Working pressure

This shows the normal allowable fluid pressure under continuous use.

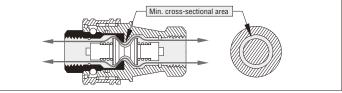

#### Pressure Loss

This shows the loss of pressure when fluid runs through the Cupla set.

#### Min. Cross-Sectional Area

This shows the minimum cross-sectional area of the fluid path when the Cupla is connected. The position is different in some products.

#### Seal Material

This shows the material used to seal the Cupla, usually an O-ring. The standard material is nitrile butadiene rubber. For materials other than those shown below, please specify such as silicone (SI), butyl (IIR), Kalrez (KL) or rubber for food, depending on your application.

#### • Properties of rubbers used for O-rings

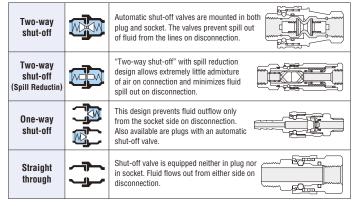

Seal materia	J	Working					
Sear materia		Temperature	Features				
Common name Nitto		Range	. saturos				
Nitrile rubber (SG)		–20°C to +80°C	Standard seal with excellent oil resistance.				
HNB		-20°C to +120°C	Compared with the standard nitrile rubber, the seal material is more heat and weather resistant.				
nitrile rubber	HNBR (H708)	-20°C to +120°C	In addition to the above features, the seal material can also be used for refrigeration oil and refrigerant applications such as HFC-134a. (The seal material is employed only in SP-V Cupla and PCV Pipe Cupla.)				
Fluoro rubber (X-100)		-20°C to +180°C	Excellent for heat, weather, and oil resistance. Applicable to wide range of applications.				
Chloroprene	CR (X-306)	-20°C to +80°C	Excellent weather resistance.				
rubber	CR (C308)	-20°C to +80°C	In addition to the above features, the seal material can also be used for refrigeration oil and refrigerant applications such as HFC-134a.				
Ethylene-propylene EPDM rubber (EPT)		-40°C to +150°C	Excellent resistance to stearn and hot water, also excellent resistance to weather and ozone.				
Perfluoroelastomer P		0°C to +50°C	Excellent resistance to chemical and solvents.				
			1				

Note: Even among rubber materials of the same category, the working temperature range differs depending upon the design of the Cuplas. For details, see the specifications of each Cupla series. As for the Nitto symbol for rubber material, fluoro rubber is designated as "FKM" or "X-100" for example. The above are general features, but the seal resistance depends on fluid temperature, fluid concentration, and additives contained in the fluid.

#### Working Temperature Range

This shows the minimum and maximum temperature, in-between which the Cupla with the seal material can be used. However, it does not mean that they can be used continuously at the minimum or maximum working temperatures. Please check with us if you need Cuplas in such extreme applications.

#### Valve Structure

#### Suitability for Vacuum

Indicates if the Cupla has necessary performance required for vacuum applications. (Note that the required performance is different in connection and in disconnection.)

#### Interchangeability

Indicates whether the plug or socket of different series, types or models can be connected with each other.

#### Max. Tightening Torque, Tightening Torque Range

Considering the balance between possible leakage caused by loose fit and too much structural stress when a Cupla is mounted on a workpiece, the appropriate screw-in torque value or range is suggested by the maker.

#### Flow Direction

The design of some Cuplas may restrict the fluid flow direction only to one way. Check the maker's suggested direction before mount.

# Semi-standard Cupla Series

"Semi-standard Cupla Series" are products with an already established record but are not standard stock items.

# Accessories

#### Special Made-to-Order Cuplas

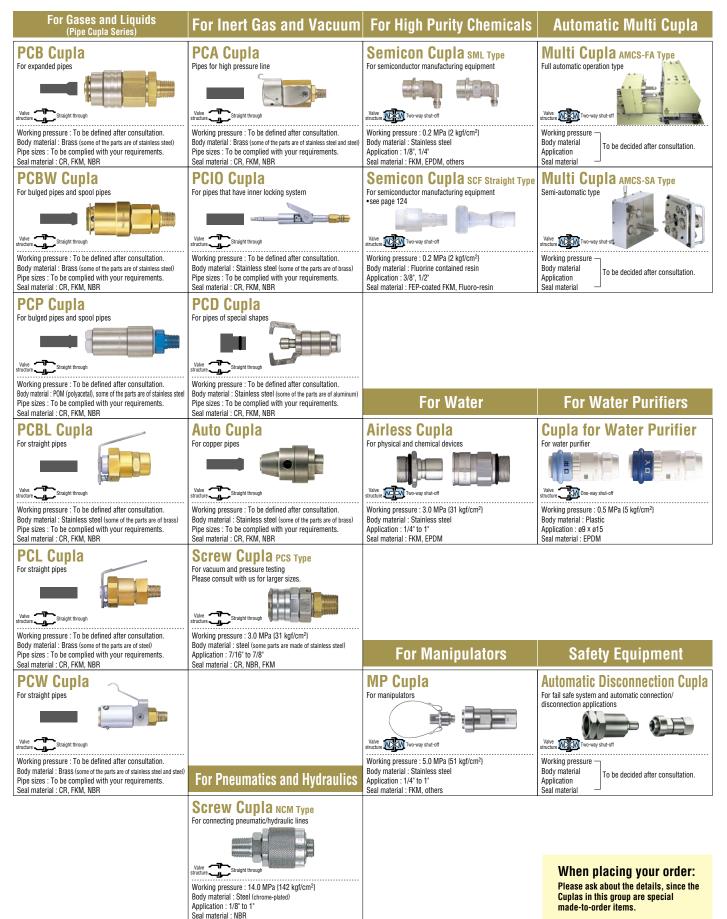

# Special Made-to-Order Cuplas

Nitto Kohki is developing Cuplas with various functions and specifications to suit respective user's applications. The Cuplas on this page are examples of such.

#### \land Important notice

Special made-to-order Cuplas are supplied based upon the specific instructions/ specifications detailed by the customer. Once written acceptance of our final drawing/ specifications of the Cupla is received from the customer we formally accept this as a final order. It is essential, as the customer, to carry out a performance test of the special made-to-order Cupla, in its specific usage conditions, for assurance of safety and adaptability to the hoses, pipes or devices used in the application. Use of the made-to-order Cupla in any application or condition other than those specified in the design drawing, will exclude Nitto Kohki from any liabilities for any special, indirect or consequential loss or damages.

# **Cupla Quality Control**

Cuplas are delivered to the user only after passing the most stringent quality control procedures, including careful selection of materials, unending pursuit of process accuracy and rigorous durability tests. Long years of devotion to thorough quality control are paying dividends in users' confidence today but still we persist in challenging even higher quality levels.

#### Quality control system that earns the constant trust from users

Electron microscope

Automatic Cupla inspection system

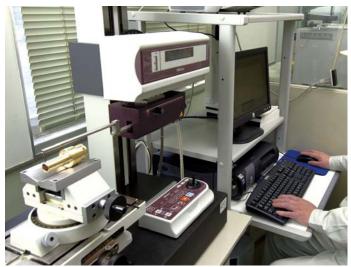

Inspection and measurement with various testing devices

Inspection in clean room

#### Examples of Air Line connections Using Hi Cuplas Group Models

Air distribution is one of the typical piping systems. Various Hi Cupla Series models meet all needs of air piping from main supply, relays in factories, pipe end connections to pneumatic tools, and those of air piping within equipment. The following sketch gives you some examples of air piping using Hi Cupla Series and may serve as a good reference in selecting appropriate Cuplas.

### **For Low Pressure**

# **Micro Cupla**

# For piping in pneumatic control devices Working pressure Valve structure Applicable fluids

### Compact, lightweight Cuplas with only 9.5 mm outer diameter. Push-to-connect operation. Tube Fitter type for even easier tube insertion.

- Even though the valve is built in the socket, the sleeve outer diameter is confined to 9.5 mm.
- Push-to-connect design.
- Compact design for piping in narrow spaces.
- Plated brass and stainless steel bodies are available for excellent corrosion resistance.
- Available in various end configurations to satisfy a wide range of pneumatic applications.

Note: Fluid will flow out from the plug side when disconnected. Take necessary precaution if the fluid is water.

### **For Low Pressure**

# **Small Cupla**

Lightweight and compact for use on air lines and scientific equipment

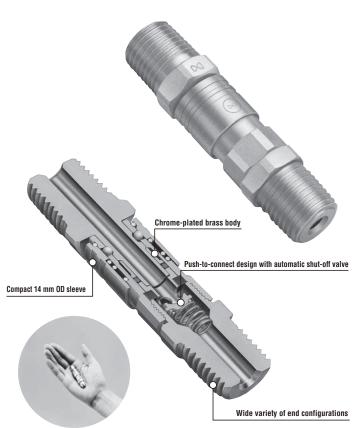

### Lightweight and compact push-toconnect operation. Responding to requirements of modular combinations.

- Compact socket with built-in valve and 14 mm OD sleeve.
   Suits applications calling for compact and modular components.
- Just push in the plug to the socket for connection by easy one hand operation.
- Chrome-plated brass for corrosion resistance adopted for the body. Stable performance for long life.
- A wide line-up of end configurations (female and male threads, hose barbs, manifolds) enables suitability with a wide range of piping applications such as pneumatic, scientific and medical equipment.

• Also available with quick connect/disconnect Tube Fitter type.

Note: Fluid will flow out from the plug side when disconnected. Take necessary precaution if the fluid is water.

### **For Low Pressure**

# **Cube Cupla**

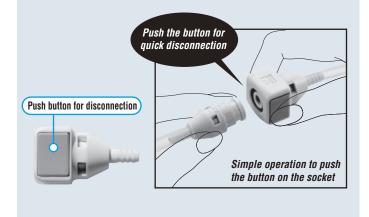

Small and lightweight coupling for air supply lines to medical and/or scientific equipment

### Both socket and plug have built-in valve types and valveless types. Simple one action for connection or disconnection. Lightweight plastic coupling.

- Ultra-lightweight, made of polyacetal resin.
- Compact design for space saving.
- Just push plug into socket for connection. Simply press the button on the socket for disconnection.
- Suitable for a wide range of applications from medical/scientific equipment to beverage machines or semiconductor manufacturing devices.
- Socket and plug cannot be disconnected unless two buttons on the socket are pressed simultaneously.
- Note: When valveless type socket or plug is used, fluid will flow out of it when disconnected. Take necessary precaution if the fluid is water.

Torque	1.3 {13}

#### Flow Direction

Fluid may flow in either direction from plug or from socket side when coupled.

#### Interchangeability

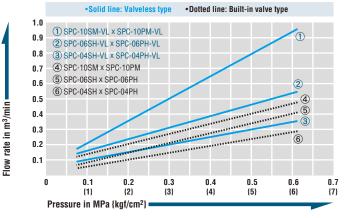

Can be connected with plug and socket for Cube Cupla of the same type regardless of end configurations. However, built-in valve sockets cannot be connected with valveless plugs.

#### Application Example

### For Low Pressure (Air)

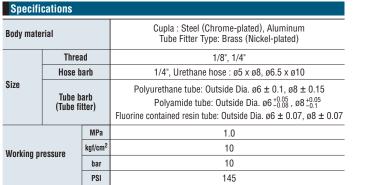

# **Super Cupla**

Light, compact for air piping connections

# The lightweight design makes the Cupla best suited to power tools! Push-to-connect for easy operation.

- Lightweight design suits direct connection to power tools. Aluminum body is adopted for some models to reduce the weight.
- Just push the plug into socket for easy one hand connection.
- Available in various end configurations for a wide range of pneumatic applications.
- Model 02S20P can be connected with sockets for Hi Cupla Models 10, 17, 20, 30 and 40.
- Also available with quick connect / disconnect Tube Fitter type.

#### Suitability for Vacuum

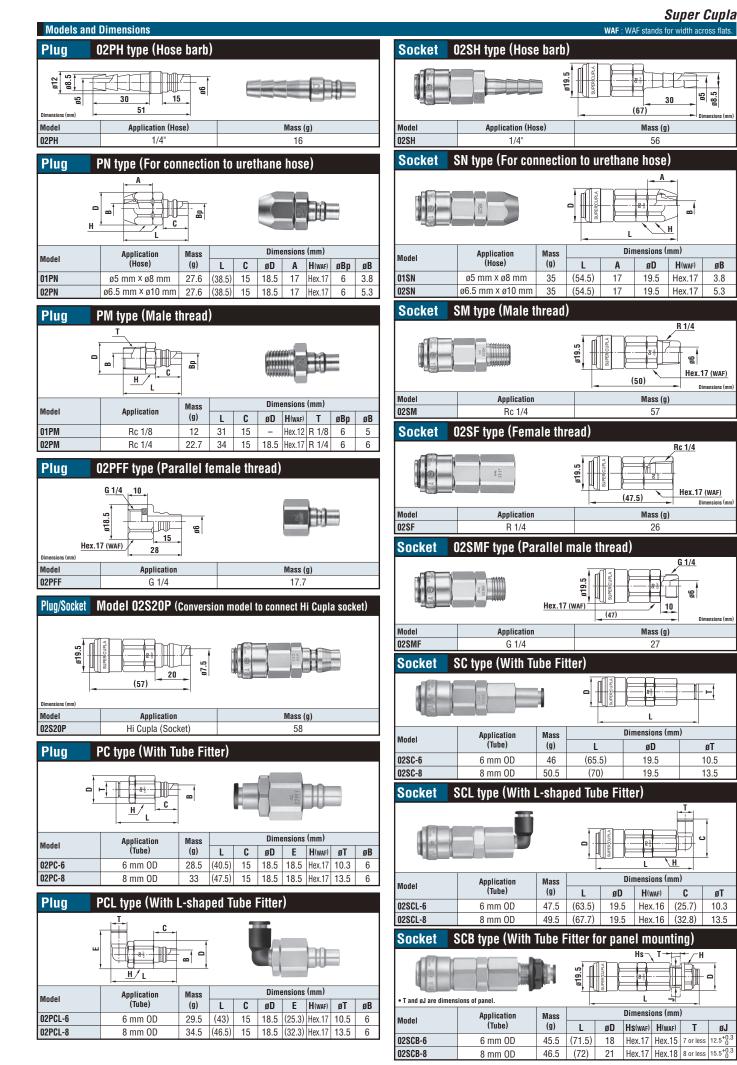

Not suitable for vacuum application in either connected or disconnected condition.

#### Pressure - Flow Characteristics

[Test conditions] •Fluid : Air •Temperature : Room temperature •Tube size : ø6 mm × ø4 mm, ø8 mm × ø6 mm (Super Cupla with Tube Fitter)

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

### **For Low Pressure**

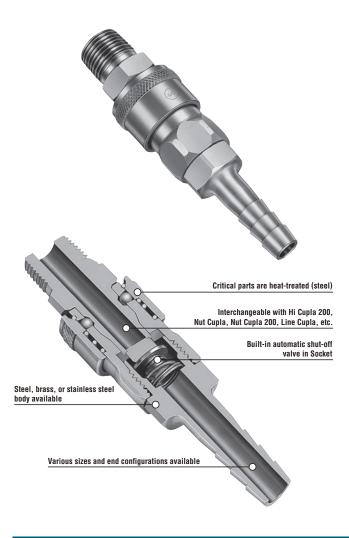

# Hi Cupla

#### Universal purpose couplings for air lines

## From factory air line to pneumatic tool connection, available in various body materials, sizes and end configurations. Excellent durability.

- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Brass or stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- Critical structural parts of steel models are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various body materials, sizes and end configurations applicable to a wide range of applications.

### **For Low Pressure**

# **Hi Cupla BL**

Universal purpose couplings with sleeve lock mechanism for air lines

# Sleeve-lock mechanism is engaged by rotating the sleeve after connection.

- Sleeve-lock mechanism prevents accidental disconnection.
- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- Critical structural parts made of steel are heat-treated for increased strength giving greater durability and resistance to wear.
- Various body materials, sizes, and end configurations are available.
- SN-BL type for connection to urethane hose requires no hose clamp.

### For Low Pressure (Air)

# Hi Cupla 200

Push-to-connect type for air lines

### Simple and secure push-to-connect type! Big flow rate! End-face seal design. Gives excellent handling touch.

- Just push the plug into the socket for simple and secure connection. This reduces connection time and improves efficiency.
- New valve design for low pressure loss to achieve flow rate increase (15% up over the conventional model).
- End-face seal is achieved when connected.
- Enhanced operability with low connection resistance.
- End-face seal design is superior to external seal with an O-ring due to no seal damage caused by exhausted lubrication.
- Available only with steel body. Not suitable for water or oil.
- Also available with quick connect/disconnect Tube Fitter type.

Hi Cupla 200

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

# For Low Pressure (Air)

Hi Cupla for Connection to Braided Hoses Nut Cupla Nut Cupla 200 Rotary Nut Cupla For connection to urethane hose

### No hose clamp required! Fitted with hose guard nut to prevent possible kinking. Hi Cupla for connection to braided hoses is now available.

- Nut types are available in Hi Cupla Series and Hi Cupla 200 Series. Hose guard nut type available to prevent hose kinking.
- To mount on hose, simply slide it over the nipple and tighten the nut.
- The design to tighten outside of hose reduces hose slip away or fluid leaks.
- Also available are Rotary Nut Cupla equipped with ball bearing swivel mechanism to prevent and relieve tension on operator's hands.

Specifications (	Nut Cup	ola / Nut Cupla	a 200 / Rotary	Nut Cupla)

# Hi Cupla for Connection to Braided Hoses / Nut Cupla / Nut Cupla 200 / Rotary Nut Cupla

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

# Lock Cupla 200

Air line coupling with sleeve safety lock feature

# Push-to-connect operation. Added easy lock design for safety!

- Locking mechanism prevents accidental disconnection after connection. Good for connections between hoses.
- Simple one push of plug and socket to each other for connection. Easy handling improves job efficiency.
- Ball bearing swivel mechanism prevents hose twists and relieves load on holding hands (SNRG type).
- To mount on hose, simply slide it over the nipple and tighten the nut (SNRG type).
- Hose guard nut to prevent hose from kinking as a standard feature (SNRG type).
- Low pressure loss valve design gives improved flow rate.

### Application Example

Applicable fluid	Application

For bidirectional compressed air flow

# Air flows in either direction from plug or from socket side when coupled. Ideal for connection of factory air supply lines to pneumatic devices.

- Can be connected with plugs for Hi Cupla Models 10, 17, 20, 30 and 40 and allows fluid to flow from either plug or socket side when coupled.
- Wide range of connections such as from ports on air pipes in factory to individual pneumatic devices.
- Critical structural parts are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various sizes and end configurations to suit a wide range of applications.

# **Full-Blow Cupla**

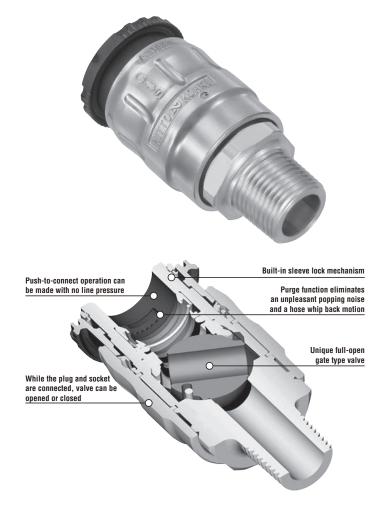

Air line coupling with low pressure loss and high flow rate

# Unique full-open gate type valve mechanism realizes low pressure loss and high flow rate, which reduces required source air volume.

- The flow rate is increased by up to 40% more than that of conventional Cuplas.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating an unpleasant popping noise and a hose whip back motion on disconnection.
- Built-in sleeve lock mechanism prevents accidental disconnection of Cuplas, ensuring safe operation.
- The valve can be opened and closed while the socket and plug are connected.

The weight is reduced by 30 to 45% compared with that of conventional Cuplas.
 Note: Direct mounting of Full-Blow Cupla to percussive and vibrating tools should be avoided.

#### Socket SF type (Female thread)

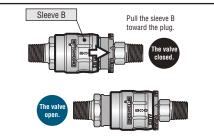

#### SN type (For urethane hose connection) Socket

## How It Works

#### 1. Open the valve

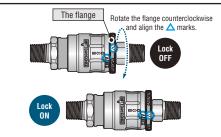

Only after connection with the plug, you can slide the socket sleeve B toward the plug in order to open the built-in valve. Full flow path is then obtained.

## 2. Lock the sleeve

Rotate the flange counterclockwise to lock the sleeve B. Without unlocking the plug you cannot disconnect.

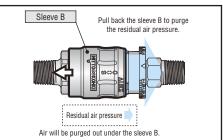

The fluid passage is opened in full.

### 3. Purge the residual air

Flow direction

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

40

Full-Blow Cupla

When disconnected The valve closed.

When the socket sleeve is slided toward the plug after connection, the ball valve rotates to open the fluid passage.

> When conn The valve open.

# Purge Hi Cupla PVR Type

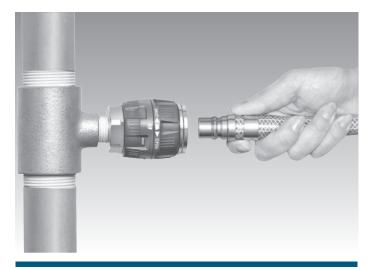

Air line coupling with built-in residual air pressure release function

# Connection can be made smoothly regardless of the existing pressure inside the socket.

- Push-to-connect operation. Easy one-hand operation.
- Built-in sleeve lock mechanism prevents accidental disconnection of Cuplas, ensuring safe operation.
- Upon completion of sleeve locking the valve will open to supply air.
- When the sleeve is turned back to its original position, the valve is closed and purges residual air pressure in the plug without an unpleasant popping noise and a hose whip back motion on disconnection.
- Even after connection, valve opening/closing control is possible.
- Flow rate increases by approximately 20% over that of Hi Cupla Model 400SM.
- Can be connected with plugs for Hi Cupla Models 400, 600 and 800.

## Function of Purge Hi Cupla PVR Type

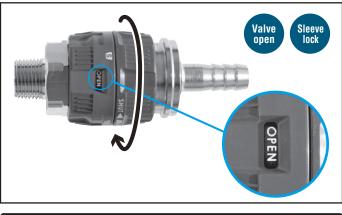

#### 1. Connection

Valve opening/closing operation and plug connection to socket can be made independently. Push-toconnect operation is achieved regardless of existing pressure inside the pipe.

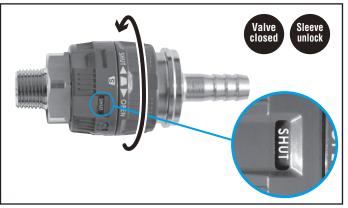

## 2. Open the valve and lock the sleeve.

Turning the operation ring will open the valve in the socket to supply air and lock the sleeve to prevent accidental disconnection.

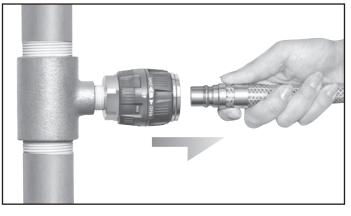

#### 3. Close the valve and unlock the sleeve

Turning the operation ring back to its original position will close the valve and stop air flow, release the residual air pressure in the plug, and unlock the sleeve.

## 4. Disconnection

Disconnection can be made without an unpleasant popping noise and a hose whip back motion due to no residual air pressure inside the plug.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

# **Purge Hi Cupla**

Air line coupling with residual pressure release function

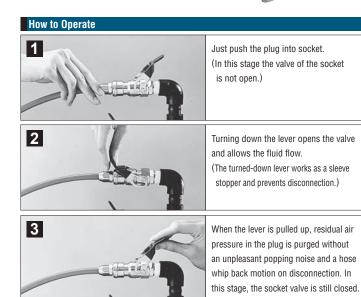

# **Push-to-connect operation even with** existing internal pressure! Eliminates an unpleasant popping noise and a hose whip back motion on disconnection.

- Just push in the plug for connection regardless of internal pressure in socket.
- Even after connection, lever operation gives perfect control over valve opening/closing.
- In disconnection, lever action releases residual air pressure in the plug without an unpleasant popping noise
- and a hose whip back motion.
- · Safe design prevents leveroperated valve from opening when plug is not connected.

Can be connected to corresponding HI Cupla plugs

Push-to-connect design

Lever action opens / closes the valve in the Cupla

# **Purge Line Cupla**

Simple air line coupling manifold with residual pressure release function

# Residual pressure can be released by a mere lever turn. Very smooth connection/disconnection!

- Single action, just push in the plug to connect regardless of internal pressure in socket.
- No unpleasant noise of air pressure discharge and no hose whip back motion on disconnection for safety operation.
- Safe design socket valve will not open or close unless plug is connected.
- Even after connection, a lever turn will open/close valve with perfect control of air flow or line shut-off.
- Enables simultaneous air supply to three outlets from a single air line. (A single outlet Purge Hi Cupla is also available – see the pages of Purge Hi Cupla for details.)

Max. Tightening Torqu	e Nm {kgf•cm}
Size (Thread)	1/2"

### Optional Items : Pressure Gauge and Drain Valve

Dimensions (mm)

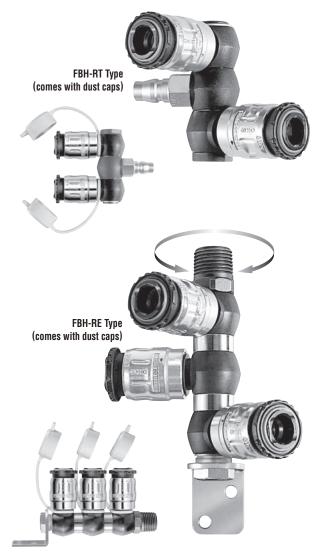

# Rotary Full-Blow Line Cupla

Free rotating branch air line coupling with low pressure loss & high flow rate

# Each air outlet can be turned freely to any angle independently.

- Multiple outlets are available from single air supply source.
- Sideway air outlets are rotatable to any angle.
- Choose either RT type (2 outlets) or RE type (3 outlets) to suit your application.
- $\bullet$  The flow rate increases by 40% to 50% over that of conventional Cuplas.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual pressure inside the plug, eliminating an unpleasant popping noise and a hose whip back motion.
- Built-in sleeve lock mechanism prevents accidental disconnection of Cuplas, ensuring safe operation.
- The valve can be opened and closed while the socket and plug is connected.

### Flow Direction

Fluid must run from the inlet port to the outlet ports.

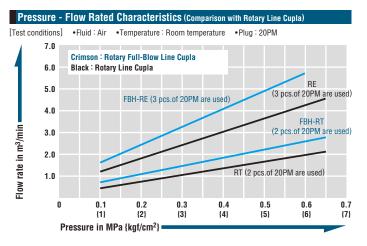

## Interchangeability

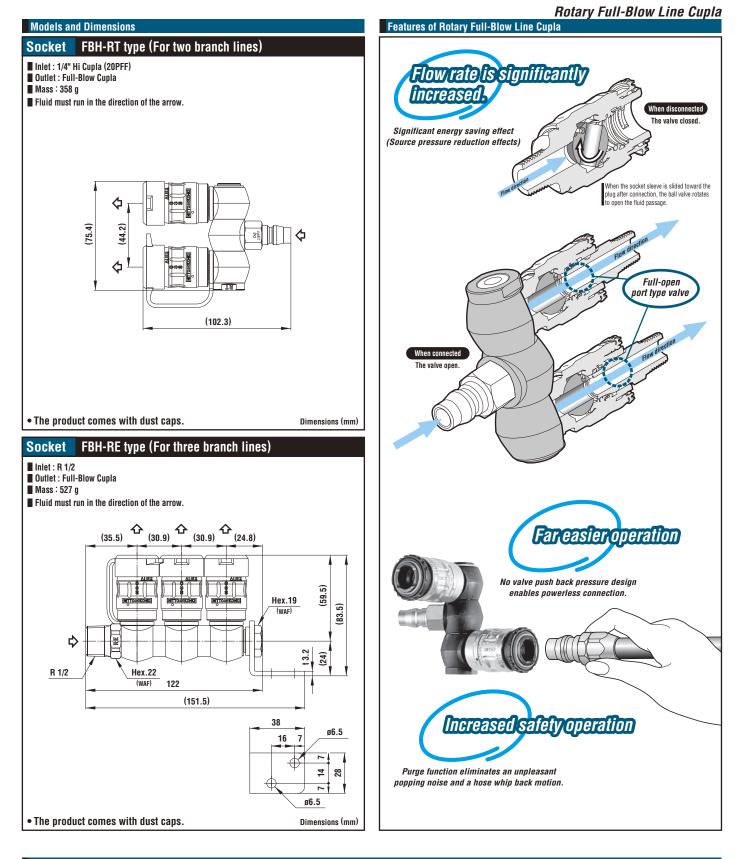

Can be connected with plugs for Hi Cupla Models 10, 17, 20, 30, and 40. Interchangeable with all other Hi Cupla Series products. Please see the page for "Hi Cupla Series Interchangeability." Cannot be interchangeable with some plugs for plastic Hi Cupla 250 (discontinued product).

Min. Cross-Sectional A	Min. Cross-Sectional Area					
Model	FBH-RT	FBH-RE				
Min. cross-sectional area	44	44				

### Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

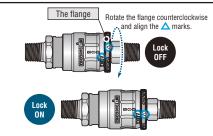

## How It Works

#### 1. Open the valve

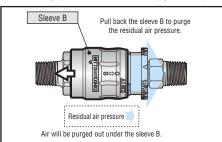

2. Lock the sleeve Rotate the flange counterclockwise to lock the sleeve B. Without unlocking the plug you cannot disconnect.

## 3. Purge the residual air

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure.

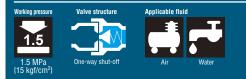

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

# **For Low Pressure**

# Hi Cupla Ace

Lightweight plastic coupling with automatic safety lock for air line applications

# The weight is merely a quarter of steel Hi Cupla's and smooth push-in connection is achieved. Automatic sleeve lock for safety operation.

- Pressure ratings comparable to steel Cuplas.
- A built-in "automatic lock mechanism" locks the sleeve upon connection, thus prevents accidental disconnection.
- Just push plug into socket for simple connection.
- The weight is a quarter of steel Hi Cupla for easy handling.
- Can be used for air and water.
- Less likely to damage painted or easily dented surfaces than metal couplings.
- Air flows in either direction from plug or from socket side when coupled.
- Plug and socket with hose guard nut are also available (see the pages of NK Cupla Hose / NK Cupla Coil Hose for details).

# **Rotary Plug**

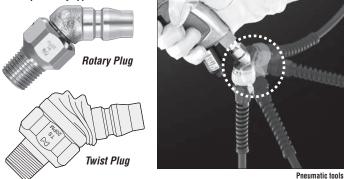

## For pneumatic tools and devices

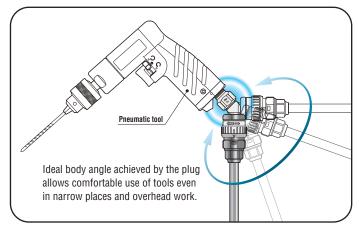

# Newly developed rotary function allows 360° swivelling! Big improvement for handling of pneumatic tools!

- Rotary neck plug for hose connection to pneumatic tools and pneumatic devices.
- $\bullet$  Fits at 45° angle to the tool eliminating annoying offset load caused by connected hose.
- Ideal compact design enables optimum workability by simple body structure. Now far lighter and smaller than conventional models.
- New dust-proof design for increased durability.
- For air tackers, nailers, impact wrenches and other pneumatic tools.

# Purge Plug

# For air lines with purge mechanism

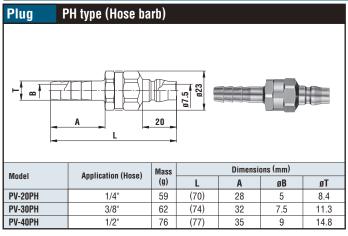

# Eliminates an unpleasant popping noise and a hose whip back motion when Cupla is disconnected.

- When the Cupla is disconnected, the pressure left in the plug side hose is released gradually without an unpleasant popping noise and a hose whip back motion.
- Unique design of air purge system enables the residual pressure release quickly and quietly.
- A unique but simple purge valve design is good for long and repeated use.
- The function is assured even under a high supply pressure or with a long hose. Note: This product is not a check valve to totally stop the air flow.

#### Application

# **Duster Cupla**

Air line coupling with air blower function

# Three functions in one: connection, air blow, hose twist release ! Dust blow without detaching the tool !

- Hi Cupla comes with compact air blow function.
- Improves job efficiency by air blow with tool still connected to hose.
- Ball bearing swivel mechanism prevents hose twist and relieves tension on operator's hand.
- Special design of air blow button switch is free from in line air pressure no hard press down required.
- Also simple is routine water drain from air line before starting daily work.

Photo shows simulated air flow.

# **For Low Pressure**

# **Mini Cupla**

Standard type for use on equipment for welding and gas cutting, etc.

# Exclusively for oxyacetylene equipment. Many variations with higher flow rates!

- · From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Double-lip seal prevents minor leak during connection. Oxygen and fuel gas Cuplas have different sizes to prevent accidental interconnection.
- Pressure loss is minimized to achieve higher flow rate.
- Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment applications. Sockets

themselves or plugs themselves are interchangeable with Mini Cupla Super's counterparts.

• Line Cupla Mini is also available for multiple piping.

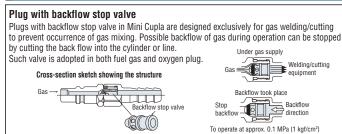

Push-to-connect operation (Built-in automatic shut-off valve in socket)

oxygen and fuel gas

Wide variety of end configurations

#### Structure and Principle of Backflow Prevention

Push-to-connect operation (Built-in automatic shut-off valve in socket)

Chrome-plated body for better corrosion resistance

Wide variety of end configurations

### Structure and Principle of Backflow Prevention

#### Plug with backflow stop valve Plugs with backflow stop valve in Mini Cupla Super are designed exclusively for gas welding/ cutting to prevent occurrence of gas mixing. Possible backflow of gas during operation can be stopped by cutting the back flow into the cylinder or line. Under gas supply Such valve is adopted in both fuel gas and oxygen plug. Welding/cutting ₽ Cross-section sketch showing the structure equipment Backflow took place IIII Backflow Backflow stop valve direction ÌTÍÓ To operate at approx. 0.1 MPa {1 kgf/cm<sup>2</sup>}

# **For Low Pressure**

# **Mold Cupla**

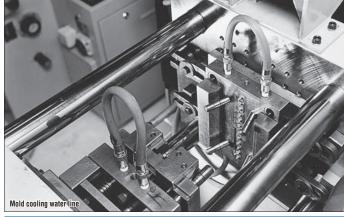

General purpose and mold coolant port coupling

# Designed for quick replacement for die and mold ! Rust resistant models having many variations.

- Space saving design for molds with closely spaced coolant ports.
- Long sleeve socket facilitates connection/disconnection with plug embedded in mold.
- Enables quick mold cooling water line connection/disconnection.
- Various sizes and end configurations to suit a wide variety of mold applications.
- Can be connected with Super Cuplas, excluding K3 and K4 types.
- Push-to-connect design. (Built-in automatic shut-off valve in the socket) Also available is Cupla without valve (Please specify in ordering).
- Cupla for braided hose connection requires no hose clamp. (Model K-90SN)

#### Mold Cupla WAF : WAF stands for width across flats.

**For Low Pressure** 

High flov		IC C gh Flow	<b>Type</b>	
Working pressure	Valve structure		Applicable fluids	
1.0 MPa {10 kof/cm <sup>2</sup> }	One-way shut-off	Straight through	Water	Heated oil

# Flow rate has doubled to increase productivity.

- High flow type K3 and K4 series are added to mold Cupla series for mold coolant and heated oil port coupling.
- Almost double flow rate compared with our standard K01, K02 and K03 series, increasing productivity.
- Space saving design for molds with closely spaced coolant ports.
- · Long sleeve socket facilitates connection/disconnection with plug embedded in mold.
- Enables quick mold coolant hose connection / disconnection.

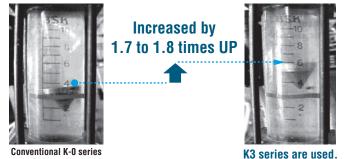

### **Results of reduced cooling time** in the field

A customer replaced conventional K-0 series Mold cuplas with the K3 series and shortened the cooling time from 30 seconds to 21 seconds meaning an 18% reduction per shot and increased productivity by 20%. Temperature checks at 8 positions on the mold showed that surface temperatures on average had fallen by 3°C, providing evidence of the high cooling efficiency.

## **Flow comparison**

Coolant water flow rate was checked with a flow meter, which confirmed increase by 1.7 to 1.8 times, when Mold Cupla K3 series are used.

Mold Cuplas were used.

**For Low Pressure** 

# **Lever Lock Cupla Metal Body / Plastic Body**

## For bulk flow, low pressure applications

# Light lever pull-down will connect the plug and socket without fail ready to flow liquid or gases.

- This Cupla complies with diversified applications in liquid or gas transportation.
- End-face seal structure enables no bumps or hollows on the internal fluid passage, and ensures smooth fluid transportation.
- A special lip packing (except sizes 3/4 and 1", silicone rubber, and FEP-covered rubber) employed reduces the load to the lever for easy operation.
- Connection part dimensions comply with US military specifications MIL-A-A-59326.
- The variety of body materials, sizes and end configurations has been standardized to comply with wide range of applications.
- · Additional stopper function design will enhance safety (only for made-to-order metal body product).

# **For Medium Pressure**

# **TSP Cupla**

## For medium pressure general applications

# Valveless structure suits high viscosity fluids! Various body materials, sizes and end configurations. **Braided hose connection types are** newly added.

- Valveless construction drastically saves pressure loss and achieves high flow rate.
- Suitable for high viscosity fluids (such as grease).
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.
- No hose clamp required! Simple and secure connection to braided hose. Note: See the pages of Seal Material Selection Table at the end of this catalog for the suitability of seal materials to fluids.

### Flow Direction

Fluid may flow in either direction from plug or from socket side when coupled.

### Interchangeability

Can be connected with the plug for TSP Cupla in the same size.

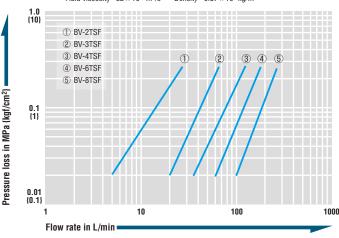

Min. Cross-Sec	tional Area	BV-2TSF BV-3TSF BV-4TSF BV-6TSF BV-8TSF								
Model	BV-2TSF	BV-3TSF	BV-4TSF	BV-6TSF	BV-8TSF					
Min. cross-sectional area	19.6	44.1	63.6	122	201					
Value of BV type only. The i	minimum cross-sect	ional area may vary	depending upon the	end configuration of	the plug.					

### Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

### Flow Rate – Pressure Loss Characteristics

[Test conditions] •Fluid : Hydraulic oil •Temperature : 30°C ± 5°C •Fluid viscosity : 32 x 10<sup>-6</sup> m<sup>2</sup>/s •Density : 0.87 x 10<sup>3</sup> kg/m<sup>3</sup>

# and ball valve. Sleeve stopper mechanism prevent accidental disconnection during connection. (when the valve is open.)

**One-piece design of TSP Cupla socket** 

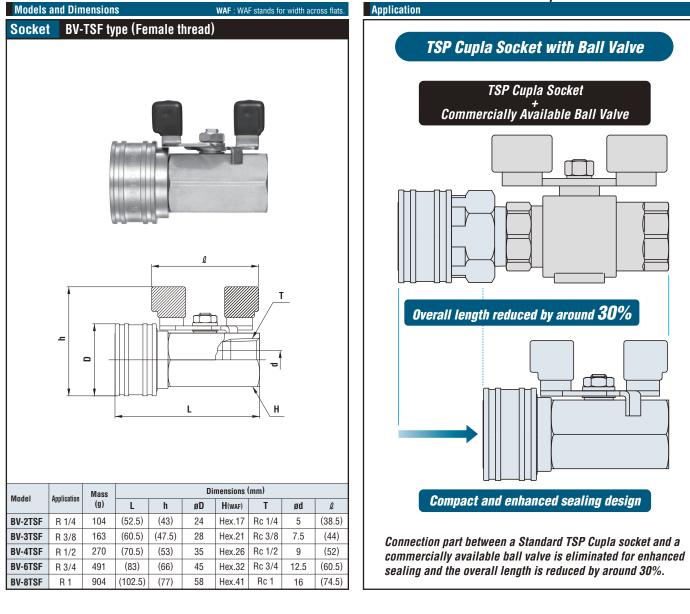

• Socket valve can be opened and shut off while socket and plug are connected.

- Ball valve design provides for high flow rate.
- A high viscosity fluid such as grease can be applied.

For low pressure general applications

Plug with male thread type is only available in brass.

### Flow Direction

Fluid may flow in either direction from plug or from socket side when coupled.

### Interchangeability

Different sizes are not interchangeable each other. Interchangeable with conventional SP Cupla in the same size. \* Interchangeable with SP-V Cuplas but take heed of flow rate.

### Flow Rate – Pressure Loss Characteristics

 $[Test \ conditions] \quad \bullet Fluid: Water \quad \bullet Temperature: 25^\circ C \pm 5^\circ C$ 

### Increased flow volume ratio

Compared with conventional SP Cupla, the flow volume is increased by 7 to 64%.

### New self-aligned valve design provides better seal

The new design of the valve head makes smooth self-aligned return to its original position when socket and plug are disconnected. This mechanism enhances safety sealing of individual socket or plug when disconnected (1 to 8SP-A Type).

### Smooth and prompt connection

The plug with the new body design enables smooth and prompt connection.

### Adoption of stainless steel SUS304

Models and Dimensions

SUS304 is adopted as the standard body material of stainless steel good for the applications that require high reliability.

\*Stainless steel complying with other standard, equivalent to SUS304, may be used for some parts.

### Interchangeability

Interchangeability of SP Type A with conventional SP is guaranteed, while no interchangeability with different sizes.

### Flow characteristics

Regardless of the body materials, the flow characteristics remain the same.

**Sleeve stopper** (Optional. See the pages of Accessories for details) A sleeve snap-in stopper securely prevents accidental disconnection.

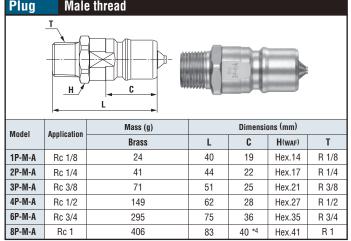

### Products complied to RoHS requirements

Nickel plating is applied for the surface treatment of the steel body to reduce the load on environment.

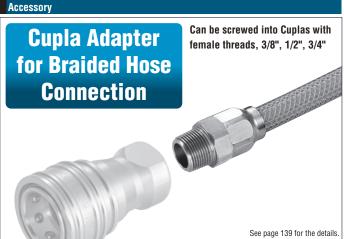

WAF : WAF stands for width across flats

\*4 Model 8P-M-A indicates an approximate insertion length because there is no difference in level on the body.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

# For Medium Pressure

# **Zerospill Cupla**

# Unique seal design reduces both liquid spillage and air ingress.

- New valve design offers smooth zero-friction movement.
- Push to connect design.
- The variety of body materials, sizes and end configurations has been standardized to comply with wide range of applications.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.

### Flow Rate – Pressure Loss Characteristics

[Test conditions] •Fluid : Water •Temperature : 25°C to 27°C

### Zerospill Cupla

# **Main Features**

# Unique seal design reduces both liquid spillage and air ingress

# <section-header><section-header><text><text>

# Reliable zero friction valve

New valve design offers smooth zero-friction movement resulting in reduced chance of malfunction caused by deterioration of valve parts.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

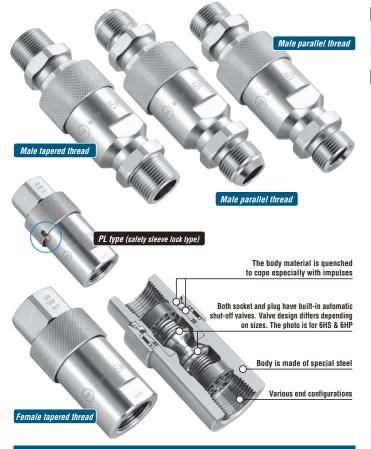

# **HSP Cupla**

For hydraulic pressure from 14.0 to 20.6 MPa {142 to 210 kgf/cm<sup>2</sup>}

# Special steel body is tough against vibration and impact! Male and female thread end configurations are available. Low pressure loss characteristic suits hydraulic equipment applications.

- Quenched special steel body!
- Powerful impact resistance, especially against impulses.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection. Easy to handle.
- In addition to conventional female thread type, male thread types (male tapered thread, male parallel thread with 30° flare, and male parallel thread with 30° cone-seat) are newly added. Male thread types are designed especially for direct connection to hydraulic power units effectively.
- Male parallel thread type complies with both metal seal and O-ring seal. (In case of O-ring seal, O-rings available in the market can be used.)
- Optional HSP-DC Cuplas are available for die-casting machine applications with severe pressure variation.
- The overall length of male thread type is shorter than that of female thread type plus conversion nipple available in the market.
- PL type (Safety sleeve lock type) for 2HS to 8HS (except 66HS) with female thread is also available as standard.

# **Hyper HSP Cupla**

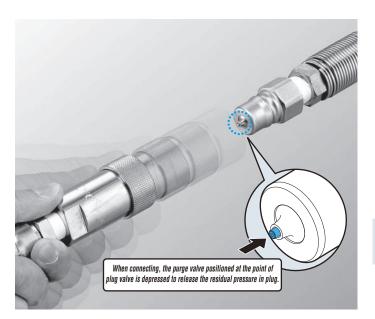

Connects hydraulic piping even with residual pressure up to 20.6 MPa {210 kgf/cm<sup>2</sup>}

# Purge function will set you free from the troublesome residual pressure elimination before connection and let you achieve efficient and frequent hydraulic pipe line coupling.

- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Interchangeable with standard HSP Cupla plug or socket in the same size.

### Flow Rate – Pressure Loss Characteristics

Note: Either socket or plug of Hyper HSP Cupla must be used on the line where the residual pressure remains. The counterpart of Hyper HSP must be either plug or socket of standard HSP Cupla.

### Hyper HSP Cupla

# 210 Cupla

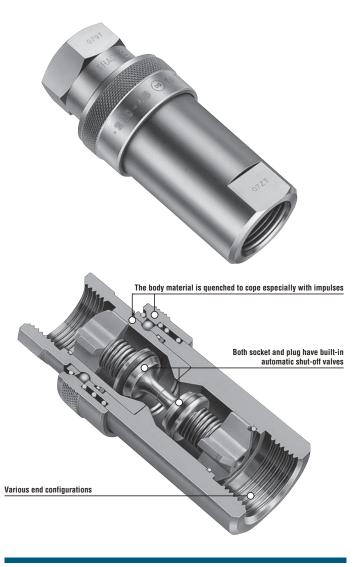

For hydraulic pressure up to 20.6 MPa {210 kgf/cm<sup>2</sup>}

# Standard hydraulic Cuplas for general purposes with a working pressure up to 20.6 MPa. Low pressure loss, suitable for

# hydraulic equipment.

- General purpose hydraulic Cuplas with a working pressure of 20.6 MPa {210 kgf/cm<sup>2</sup>}.
- Structure is designed to reduce pressure loss to the lowest, and is best for hydraulic applications that need big flow rates.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow when disconnected. Easy to handle.

### Application Example

# **HSU Cupla**

Stainless steel Cupla for high pressure up to 21.0 MPa {214 kgf/cm²}

# The flow volume is increased by between 14 to 44% while at the same time the coupled length is reduced by at least 10% compared with the S210 Cupla.

- Body material is excellent corrosion resistant stainless steel (SUS304).
   Suitable for use in tough/harsh environments such as offshore applications.
- Sleeve stopper mechanism can be engaged by rotating sleeve after connection.
- Despite having a stainless steel body, the working pressure, 21.0 MPa, of HSU Cupla is comparable to that of special steel body Cuplas such as HSP Cupla series.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.
- Hydrogenated nitrile rubber (HNBR) is used as a seal material for wide variety of liquids.

### Flow Rate – Pressure Loss Characteristics (Hydraulic oil / Water)

[Test conditions] •Fluid : Hydraulic oil •Temperature : 30°C to 32°C •Fluid viscosity : 32 × 10°6 m²/s •Density : 0.87 × 10³ kg/m³

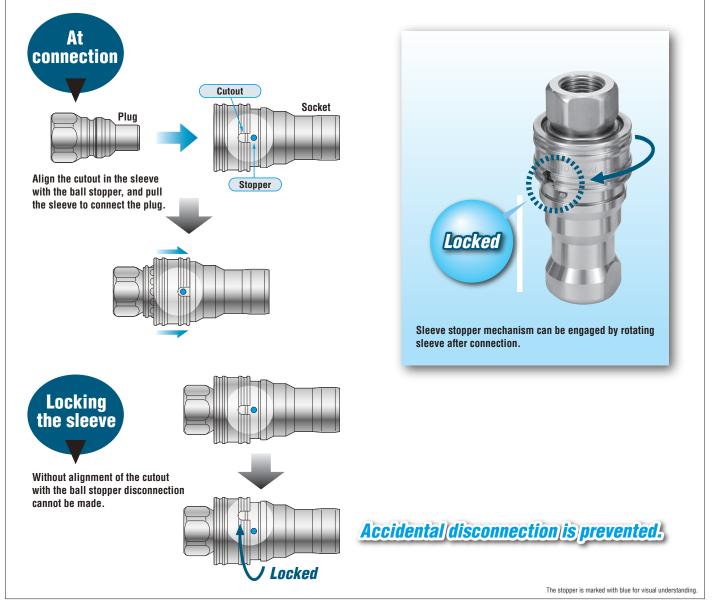

[Test conditions] •Fluid : Water •Temperature : 18°C

### Sleeve Stopper Mechanism

# Easy to operate sleeve stopper mechanism enhances operator safety.

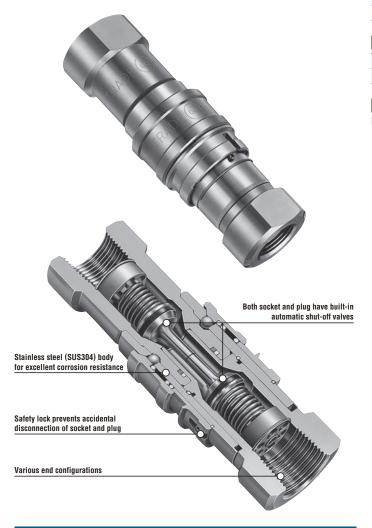

# S210 Cupla

Stainless steel Cupla for high pressure up to 20.6 MPa {210 kgf/cm²}

# Stainless steel for excellent corrosion resistance! The unique "inner seal mechanism" accepts a working pressure up to 20.6 MPa.

- Body material is excellent corrosion resistant stainless steel (SUS304). Suited for use in tough conditions such as ocean development.
- Although it is made of stainless steel, the unique "inner seal mechanism" enables the working pressure of 20.6 MPa {210 kgf/cm²}, the same as special steel's.
- Safety lock (accidental disconnection prevention mechanism) ensures tight and secured connection under vibration or impacts.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection. Easy to handle.

### Application Example

### **S210 Cupla** WAF : WAF stands for width across flats.

# 280 Cupla

For hydraulic pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm<sup>2</sup>}

# Generic Cupla copes with high pressure lines in hydraulic equipment! Low pressure loss is ideal for hydraulic equipment.

- Complys with international standard ISO 7241-1A.
- General purpose hydraulic Cuplas with the working pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm<sup>2</sup>}.
- Structure keeps pressure loss extremely low, particularly ideal for hydraulic applications requiring high flow rates.
- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected. Easy to handle.
- Special steel body material is adopted for its excellent strength and additional quenching treatment is done to withstand hydro pressure impacts.

Max. Tightening Torque Nm {kgf•cm}							
Size (Thread)	1/4"	3/8"	1/2"	3/4"	1"		
Torque	28 {286}	40 {408}	80 {816}	100 {1020}	180 {1836}		

### **Flow Direction**

Fluid may flow in either direction from plug or from socket side when coupled.

### Interchangeability

Different sizes cannot be connected.

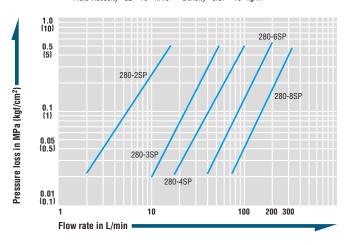

Min. Cross-Sectional Area (mm <sup>2</sup> )						
Model	280-2SP	280-3SP	280-4SP	280-6SP	280-8SP	
Min. cross-sectional area	11.4	42.8	79.1	146.5	235.6	

Suitability for Vacuum		1.3 Pa {1 x 10 <sup>-2</sup> mmHg}
Socket only	Plug only	When connected
_	_	Operational

Admixture of Air on Connection Admixture of air may vary depending upon the usage conditions. (mL)							
Model	280-2SP	280-3SP	280-4SP	280-6SP	280-8SP		
Volume of air	0.37	1.02	2.63	8.83	16.04		

### Flow Rate – Pressure Loss Characteristics

[Test conditions] •Fluid : Hydraulic oil •Temperature : 30°C ± 5°C •Fluid viscosity : 32 × 10° m²/s •Density : 0.87 × 10³ kg/m³

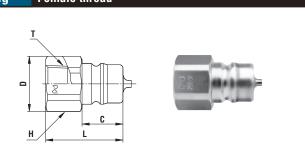

There is no interchangeability between 280 Cupla and HSP Cupla or 210 Cupla. Do not connect each other even if some sizes are approximate.

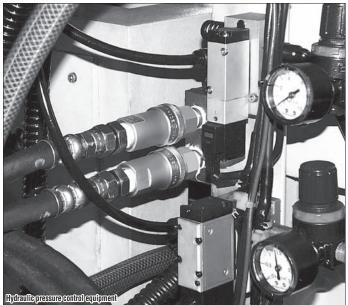

### Plug Female thread

Model	Application Mass		Dimensions (mm)						
Wouer	Application	wass (y)	L	øD	C	H(WAF)	T

### **Optional Accessory**

# **Purge Adapter** Metal Purge Adapter for hydraulic lines (Semi-standard)

### • Can be attached to hydraulic lines to purge residual pressure effectively.

Model	PAD-2 (Part No.CB19855)		
Applicable fluid Hydraulic oil			
Material	Steel (With autocatalytic nickel-phosphorus coating)		
Working pressure	35.0 MPa, 357 kgf/cm <sup>2</sup> , 350 bar, 5080 PSI		
Seal material	Nitrile rubber (NBR)		
Working temperature range	-5°C to +80		

When ordering, please indicate Model Name or part number. Semi standard items: As these items are not always in stock, delivery time is subject to confirmation.

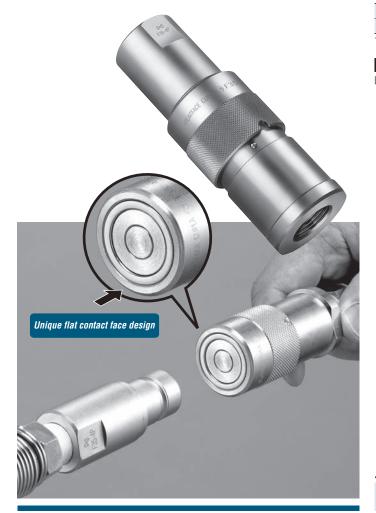

# **Flat Face Cupla F35**

For hydraulic pressures up to 35.0 MPa {357 kgf/cm<sup>2</sup>} with flat contact face

# Flat contact face design reduces spill upon disconnection by less than half compared with that of conventional design.

- Flat contact face design makes it easy to clean dust and foreign matters adhered on the surface of coupling so as to prevent them from entering inside and thus causing faulty operation of connection or disconnection.
- Flat contact face design minimizes air admixture during connection to keep the possible malfunction of equipment caused by the air bubbles in the hydraulic line at minimum level.
- Push-to-connect operation.
- Sleeve stopper mechanism is engaged by rotating sleeve after connection. It prevents accidental disconnection even when vibration or impact is applied to the Cupla.
- The special design reduces pressure loss considerably, and especially suited to hydraulic applications in which big flow is needed. Both socket and plug have built-in automatic shut-off valves that prevent fluid spill out on disconnection.

### Application Example

# **Flat Face Cupla FF**

For hydraulic pressure up to 35.0 MPa {357 kgf/cm<sup>2</sup>} with flat contact face

# Compared with Nitto's conventional 35 MPa Cuplas, the flow volume is increased 1.5 to 2 times.

\*Increase ratio of each flow volume depends on the Cupla size.

- "Airless valve shut-off" design minimizes spillage volume on disconnection and admixture volume of air on connection.
- Best suited for hydraulic lines with drastic high pressure pulsation such as in die-casting machines.
- Sleeve stopper design preventing accidental disconnection under vibration or impacts enhances workability and safety.
- Sizes are Rc 3/8, Rc 1/2, Rc 3/4, and Rc 1. \*Only the same size of socket and plug can

Offset concave flat face enables quick and smooth connection

### Unique flat face design

Concaved offset for the flat face on socket guides plug for quick and smooth centering and connection, but still easy to wipe off dirt and dusts.

Hexagon nut for easy mount

### Applications

- Hydraulic piping for die-casting machines
- Casting machines
- Electric furnaces
- Molding presses
- Forging press
- Powdery alloy presses
- Extrusion molding machines
- Machine tools
- Iron manufacturing blast furnaces
- Continuous casting machines
- Rolling mills
- Pipe forging machines
- Furnace opening / closing machines
- Glass molding machines, etc.

Built-in automatic shut-off valve

# 450B Cupla

For hydraulic pressure up to 44.1 MPa {450 kgf/cm<sup>2</sup>}

# Metal-touch valve system with superior durability! Sleeve stopper mechanism gives secure connection.

- Cupla for higher working pressure up to 44.1 MPa {450 kgf/cm<sup>2</sup>}.
- Mechanism to prevent accidental disconnection ensures tight connection even under vibration or impact when connected.
- . Both socket and plug have metal-touch automatic shut-off valves that prevent fluid spill out on disconnection.

# **700R Cupla**

For hydraulic pressure up to 68.6 MPa {700 kgf/cm<sup>2</sup>}

# High pressure Cupla for working pressures up to 68.6 MPa. Unique sleeve ring-lock system copes with vibration and impact when connected.

- Metal-touch valves use no rubber seal, and thus ensure excellent durability.
- Special sleeve ring-lock system maintains tight connection even under vibration or impact when connected.
- Both socket and plug have metal touch automatic shut-off valves that prevent fluid spill out on disconnection.

# Mam-B Type

### Multiple port system

# Simultaneously connects several ports securely in one operation. Greatly reduces changeover time in multiple ports replacement.

- Handles several ports at once.
- Simple manual lever action completes easy connection / disconnection.
- Two-stage lever operation prevents Cupla from accidental dropping due to sudden detachment.
- Comes with lock mechanism to prevent accidental disconnection.
- Large flow equivalent to that of SP Cupla Type A.
- Two kinds of plates are available for each size.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Self-aligned valve design provides safety sealing of individual socket or plug when disconnected.

# For Multi-Port Connection (Automatic)

# Multi Cupla MAS Type / MAT Type

# 7.0 MPa {71 kgf/cm<sup>2</sup>} general purpose type

# Connects multiple lines simultaneously with a single operation for different fluids and sizes.

- Ideal for automated hydraulic or pneumatic cylinder operated systems that need to connect and disconnect several lines simultaneously.
- Automatic shut-off valves in both sockets and plugs ensure no outflow of fluid on disconnection.
- Body materials other than stainless steel are available, which can be ordered with or without valves (made-to-order products).
- Snap ring and screw thread-in types to mount on the base plate are standardized.
- MAS type can accept axial eccentricity between socket and plug. The allowance of eccentricity is within the radius range of 0.3mm.
- \* Cupla connection or disconnection with fluid under dynamic pressure cannot be made.

Specifications						
Body material		Stainless steel (Au	tocatalytic nickel-pho	osphorus coating)		
	MPa		7.0

# Minimal air admixture during Cupla connection

- Special valve structure allows minimal air admixture in fluid lines during Cupla connection.
   Liquid bleeding on Cuplas disconnection is very little, which makes it best for frequent connection/ disconnection applications.
- Snap ring and thread screw mount types to mount on the base plate are standard.
- MALS type can accept axial eccentricity of socket and plug, or allow a plate hole position tolerance of ±0.3mm because of the 0-ring around the body.

Specifications

# For Multi-Port Connection (Automatic)

# Multi Cupla

# MALC-SP Type for Medium Pressure Use

# Low spill type for medium pressure use

# A single operation enables simultaneous connections of multiple lines. A special design for medium pressure use minimizes air admixture in fluid lines upon connection.

- Compared with conventional Multi Cuplas, approximately double flow rates are realized. This could reduce the size of required plates. (Rate of flow increase depends on Cupla sizes.)
- The MALC type realizes a 2 mm axial eccentricity allowance, while the conventional Multi Cupla is only 0.6 mm.
- Special valve design enables connection of socket and plug under pressure of up to 2 MPa. (up to 1.5 MPa for MALC-12SP.)
- When connected, the distance between the socket plate and the plug plate is designed to be 30 mm for all sizes. This means that any size of Cupla can be mounted and used on the same plate.
- Low spill valves minimize outflow of fluid and admixture of air into the fluid line.

# For Multi-Port Connection (Automatic)

Multi Cupla

MALC-HSP Type for High Pressure Use

# Low spill type for high pressure use

# A single operation enables simultaneous connections of multiple lines. A special design minimises air admixture in fluid lines upon connection. Suitable for high pressure hydraulic circuits.

- Compared with conventional Multi Cuplas, approximately double flow rates are realized. This could reduce the size of required plates. (Rate of flow increase depends on Cupla sizes.)
- The MALC type realizes a 2 mm axial eccentricity allowance, while the conventional Multi Cupla is only 0.6 mm.
- Special valve design enables connection of socket and plug under dynamic pressure of up to 8 MPa.
- When connected, the distance between the socket plate and plug plate is designed to be 30 mm for all sizes. This means any size of Cupla can be mounted and used on the same plate.
- Low spill valves minimize outflow of fluid and admixture of air into the fluid line.

# Semicon Cupla SP Type

For semiconductor manufacturing production installation

# General purpose type with stainless steel body and rubber seal. Electro-polished body for enhanced corrosion resistance.

- Body and valve springs are stainless steel (SUS304). Body is electro-polished for enhanced corrosion resistance.
- Seal materials can be selected to suit your fluid and application, to flexibly comply with your semiconductor production process requirements.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- No grease is applied to the seal material.
- Each plug comes with a dust cap.
- Stainless steel SUS316 body and valve springs are available as made-to-order products.

# Fluorine contained resin packing seal and perfluoroelastomer packing seal are used to reduce required connection load and to achieve tight sealing.

- The material of body and spring are of stainless steel (SUS304), while that
  of valve is of fluorine contained resin. The combination shows excellent
  performance with various types of chemicals.
- Body (SUS304) is electropolished for enhanced corrosion resistance.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- Grease is not applied to the seal materials.
- Flanged body makes it easy to operate even with gloves.

\*Made-to-order item

• Plug comes with a cap made of high density polyethylene (HDPE).

• Outer appearance of NPT thread type differs slightly from that of the above.

Please contact us about end configurations other than female thread such as flange and male thread.

Excessive tightening will damage the threaded part and result in leakage.

Note: A very small amount of gas can permeate polytetrafluoroethylene (PTFE) bellows in the socket.

Before use, please be sure to read

# Semicon Cupla SCF Type

# All plastic model. Fluoropolymer resin (PFA) body is injection molded.

- All parts made of fluoropolymer resin. O-rings in particular are FEP-covered fluororubber with excellent chemical resistance and no rubber elution.
- Unique new techniques such as "injection molding", "tube connect system" and "nut type plug mount design" are used to prevent the generation of particles, incessant headache for semiconductor parts manufacturers.
- To connect with a plug, just push the socket on to it. Disconnection is done in simple and one-handed button operation.
- Unique "double lock mechanism" prevents accidental disconnection of socket and plug.
- Branched tube port improves operability and reduces required piping space.
- Plugs come with a dust cap.
- All components are cleaned, assembled, inspected, and then packed in a clean room.

# **For Paint**

# **Paint Cupla**

# Piping for painting equipment

# Quick connection and disconnection of paint spray gun and paint fluid line is realized.

- Unique swing connection system enables easy connection and disconnection of paint spray gun and paint hose even by gloved hands.
- Full-open gate valve mechanism prevents paint precipitate buildup.
- Adoption of special resin seal that has resistance against solvents made it
  possible to feature superior durability, long stable capability, and easy
  cleaning of paint spray gun after the job.
- Connection and disconnection can be made even if paint sticks to the socket sleeve.
- Small and lightweight design (80 g per set) reduces the weight to be held by hand of operators.
- Built-in sleeve lock mechanism prevents accidental disconnection of Cuplas, ensuring safe operation.
- · Wide variety of end configurations

# For Inert Gas and Vacuum

# **SP-V** Cupla

# Automatic shut-off valves in both socket and plug for vacuum applications. Each can withstand a vacuum of as high as 1.3 x 10<sup>-1</sup> Pa even when disconnected.

- Uses automatic shut-off valves with ultra-tight sealed construction in both socket and plug. Ideal for vacuum applications.
- Having automatic shut-off valves in both socket and plug facilitates easy fluid handling. Suitable for a wide range of vacuum applications as high as 1.3 x 10-1 Pa {1 x 10-3 mmHg} even when disconnected.
- Three types of seal material are available to suit any of the diversified production lines for air conditioners, refrigerators or similar.
- Can be connected with SP Cupla Type A.

# Seal Materials for Refrigerants

Various eco-friendly refrigerants for air conditioner and refrigerator have been developed. Nitto Kohki, having invested years in the research and development of excellent seal materials to withstand refrigerants and refrigerant oils, has made early attempts to develop and manufacture the seal materials for these eco-friendly refrigerants.

	Seal material							
	Hydrogenated nitrile rubber	Chloroprene rubber						
Mark	HNBR (H708)	CR (C308)						
Features	Resistant to hydrofluorocarbons (HFC-134a, HFC-407C, HFC-410A, HFC-404A), and PAG type and ester type oils. Also resistant to heat up to 120°C	Excellent resistance to hydrofluorocarbons (HCFC-22 and HFC-134a)						
Application	Refrigerator production lines Air conditioner production lines	Air conditioner production lines						

The sleeve shape of 4S-V and 6S-V differs from that of the above photo.

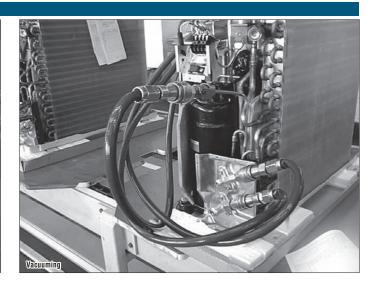

# Comparison of External Appearance

When two different gases are used simultaneously in the production lines, SP-V-GN type and SP-V-GNN type (non-interchangeable with standard SP-V and each others) may be required in order to prevent connections to improper lines by mistakes. They are made-to-order items. For details please contact Nitto Kohki direct or its distributor in your country.

Application Example

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Inert Gas and Vacuum

# **PCV Pipe Cupla**

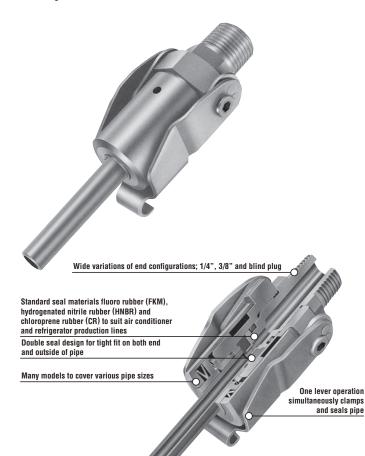

# For connection to copper pipes Working pressure Valveless Applicable flu

# Clamps directly on straight copper pipes ! Double seal construction withstands a vacuum of up to 1.3 x 10<sup>-1</sup> Pa.

- Clamps directly on to a straight copper pipe eliminating unnecessary welding or flaring.
- Withstands a vacuum of up to 1.3 x 10<sup>-1</sup> Pa (when connected) making it possible to be used in leak testing, evacuation and refrigerant gas charge.
- Select from three standard types of seal materials to be used with fluids for air conditioner and refrigerator production lines. Many models to suit various pipe sizes.
- One lever operation simultaneously clamps and seals pipe. Double seal construction for tight fit on end and outside surface of pipe ensures excellent sealing and vacuum resistance.

• For mass with a plug, add (brass body) 2P-V : 39 g, 3P-V : 67 g, (stainless steel body) 2P-V : 34 g, or 3P-V : 59 g \* Available on request

# **Clamping Mechanism**

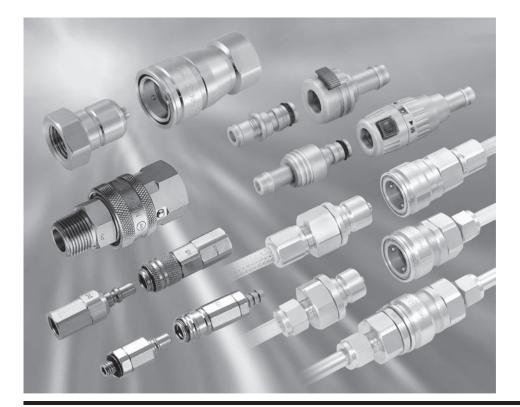

When the lever is pushed down, the sleeve moves in the direction of the arrow, and at the same time actuates the chucks to grip the copper pipe firmly and provide a tight seal.

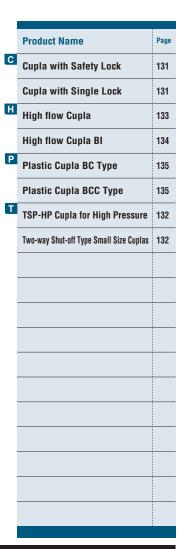

# Application Example

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

# *Semi-Standard Cupla Series Index*

# Cupla with Single Lock Cupla with Safety Lock

Accidental disconnection prevention mechanism

The standard Cuplas listed on the right can have an additional single lock or a safety lock mechanism to prevent accidental disconnection.

• Cupla with Single Lock

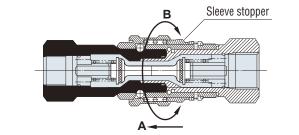

The sleeve is provided with a cutout and the body of the socket has a projecting lock pin or ball. After connecting the Cuplas, simply turn the sleeve to lock the back and forth movement of the sleeve.

Cupla with Safety Lock

A sleeve stopper Lock Ring is provided below the sleeve. After connecting the Cuplas, simply turning the Lock Ring to disable the back and forth movement of the sleeve (see diagram sketch on the right top).

# Construction of and How to Use Safety Lock (Accidental Disconnection Prevention Mechanism)

### • To lock the sleeve

Push the sleeve stopper toward A and turn  $90^{\circ}$  (toward B) to the left or right to engage the sleeve stopper.

#### • To unlock the sleeve

Push the sleeve stopper toward A and turn  $90^\circ$  (toward B) to the left or right to disengage the sleeve stopper.

# Cuplas with Single Lock / Safety Lock

- *Cuplas with Single Lock* • Hi Cupla (Brass) / • Mold Cupla
- SP Cupia (Brass) / Molu Cupia • SP Cupia Type A / • TSP Cupia
- HSP Cupia / 210 Cupia
- \*The above all with single lock are

made-to-order.

# The following Cuplas come with single lock as standard feature.

### • Hi Cupla BL

- Lock Cupla 200
- HSU Cupla
   350 Cupla
- Flat Face Cupla F35
  - Flat Face Cupla FF
  - 450B Cupla

# Cuplas with Safety Lock

- SP Cupla Type A
- TSP Cupla / HSP Cupla
- 210 Cupla / 350 Cupla
- \*The above all with safety lock are made-to-order.

The following Cupla comes with safety lock as standard feature.

• S210 Cupla

# Two-way Shut-off Type **Small Size Cuplas**

For temperature controllers Working pre

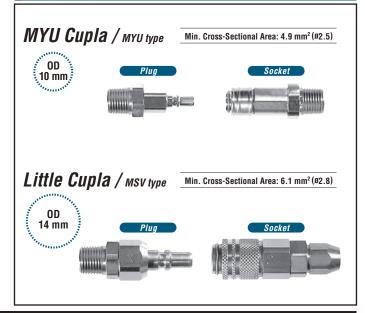

· Push-to-connect operation.

{15 kgf/cm

- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Easy connection even in a restricted area.
- Lightweight feature will allow you easy design of multiple piping.

IV

 $\triangle$  Precautions for use

**∕** Marning

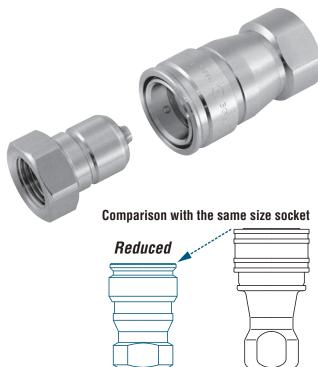

Do not connect with standard TSP Cupla (Page 71 to 74).

# **High Flow Cupla**

# **Drastically increases flow volume** while minimising pressure drop.

- Both socket and plug have built-in automatic shut-off valves.
- High flow rate type to increase cooling effect.
- Quick connection and disconnection of cooling pipes.
- · Compact and space-saving design. Compared with the coupled length of SP Cupla type A, that of High Flow Cupla is reduced by 22%.
- Installation and maintenance can be done within a short time.

# High Flow Cupla BI Type

Cupla with ferrule flange for piping of water and fluids for temperature control

# High flow Cupla and ferrule flange are combined to achieve efficient piping.

- Easy connection with stainless steel pipe.
- Connection to plastic hose is possible with optional hose connection kit.
- Connection to various tubes is also possible via the use of appropriate optional inserts.

# Plastic Cupla BC Type Valveless

# For low pressure air piping

- To connect, just push the plug into the socket.
- Plastic makes this ideal for use in environment prone to rusting.
- Compact and light weight for easy handling.
- Valveless construction gives more stable flow.

efore use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products

# Plastic Cupla BCC Type with Flow Controller For low pressure air piping

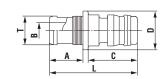

- To connect, just push the plug into the socket.
- Plug with built-in automatic shut-off valve.
- Socket with handy flow controller.
- Plastic makes this ideal for use in environments prone to rusting.
- Compact and light weight for excellent handling.

- · Protection cover wraps up the whole Cupla to absorb impacts and to reduce the risk of damage if the Cupla accidentally strikes other components or products.
- Protection covers can be cut to fit the hose diameter which the Cupla is connected to.
- Can be attached to either the socket or the plug, and can be used as a dust cap.

Part number	Model	Applicable Cuplas	Sales unit	Material
CB23784	SOC-HI	Can be attached to Nut Cupla socket or plug (SN type & PN type) and the Full-Blow Cupla socket (SN Type).	1	Polyvinyl chloride (PVC)

Can be cut easily with

scissors to fit various

hose sizes.

See page 136 for the details of Dip Mold Cap and Safety Cap for Hi Cupla.

# Accessories for O-ring Maintenance

Jigs & grease for replacement of O-rings for SP Cupla Type A, Zerospill Cupla and HSP Cupla

• Quality of seal materials plays an important role in maintaining the performance of a Cupla. O-rings or seal materials of SP Cupla Type A, TSP Cupla ,Zerosupill Cupla and HSP Cupla are designed to be replaceable. Please be certain to choose the correct and genuine Nitto kohki O-ring in order to maintain the performance of Cuplas.

# Purge Adapter

Metal Purge Adapter for hydraulic lines (Semi-standard)

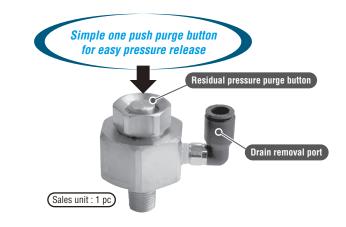

# Can be attached to hydraulic lines to purge residual pressure effectively.

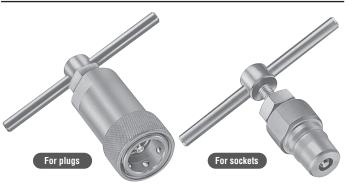

Model	PAD-2 (Part No.CB19855)
Applicable fluid	Hydraulic oil
Material	Steel (With autocatalytic nickel-phosphorus coating)
Working pressure	35.0 MPa, 357 kgf/cm <sup>2</sup> , 350 bar, 5080 PSI
Seal material	Nitrile rubber (NBR)
Working temperature range	-5°C to +80

# **Residual Pressure Release Jig**

Residual Pressure Release Metal Jig for SP Cupla Type A and Hydraulic Cuplas (Semi-standard)

- · Residual pressure within socket or plug can be released easily just by turning the handle.
- · Residual pressure release jigs are available in two types; socket type for use with plugs and plug type for use with sockets.
- Connecting to sockets or plugs is the same as connecting normal Cuplas.

Model		Attachable Cuplas	Sales unit
The model name is to be defined in the following manner.  Z N – Type of Cupla to be attached  Residual pressure release jig	Example: For the Cupla model 350-3S, the jig name would be ZN-350-3S	Sockets and plugs for SP Cupla Type A, HSP Cupla, 210 Cupla, S210 Cupla, 280 Cupla and 350 Cupla	1 pc.

The photos show the jigs for HSP Cupla

# Cupla Adapter for Braided Hose Connection

# Mounts on Cupla plug / socket with female thread

- Adapter for Cuplas with female thread such as Zerospill Cupla and SP Cupla Type A.
- No hose clamp is required resulting in reduced risk of injuries to fingers or palms.
- Deterioration of the braided hose at the hose barb part has been eliminated.
- Unique nut construction increases the pulling load of braided hoses. • Simply push a braided hose onto the hose barb to the end and tighten the nut
- until it is flush against the hose barb base.
- No inner parts for conventional braided hose fittings are required. Thus incorrect assembling does not occur.

Please use braided hoses available in the market.

Specifications				
Body material		Bra	iss	
Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Size (Thread)	3/8"	1/2"	1/2"	3/4"
Braided hose size	ø9 x ø15 mm	ø12 x ø18 mm	ø15 x ø22 mm	ø19 x ø26 mm
Working pressure *1,*2	Depends up	on the specificatior	ns of braided hoses	s to be used.
Working temperature range *2	Depends up	on the specificatior	ns of braided hoses	s to be used.
Applicable fluids *3		Air, Wa	iter, Oil	

Max. Tightening Torque				Nm {kgf•cm}
Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Torque (Taper Pipe Threads) *4,5	12 {122}	30 {306}	30 {306}	50 {510}

\*1 • This shows the normal allowable fluid pressure under continuous use 2: Working pressure and working temperature of Cupla and Adapter for braided hoses depend upon the specifications of braided hoses to be used.
 2: Use the specification of the seal material and the braided hose to be used.
 4: Specification or the specification of the seal material and Adapter if they are used under corrosive environment.

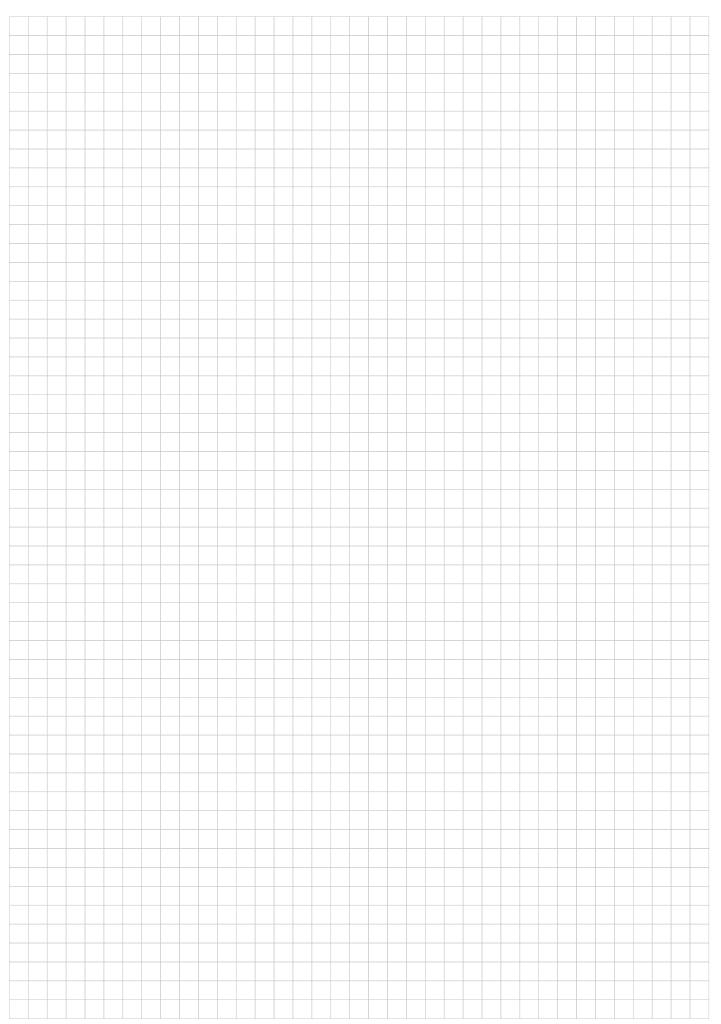

Take note of usage conditions.

\*5 : Tighten the nut until it is flush against the hose barb base after pushing a braided hose to the end.

· Braided hoses should be made of soft PVC and woven by reinforcement thread.

# Seal Material Selection Table for Reference

For seal parts in the Cupla (the important parts that prevent leaking to the outside), it is important to select the most appropriate seal material to suit the property and temperature of the fluid. It is so important that wrong selection may not only completely malfunction the Cupla but also cause an unexpected accident.

\*When the fluid in question is not listed in "Seal Material Selection Table (For reference)," the seal material that you select should be tested under actual environment. Even if the fluid is stated in the following list, the test could be required in some cases.

				Se	al Mate	rial							Sea	al Mate	rial

# How to read the selection tables

- $\bigcirc$  Practically no harm, and can be used (Excellent)
- $\bigcirc$  Some harm may be inevitable but can be used under restrictions (Good)
- $\triangle$  Should be avoided if at all possible (Not recommended)
- imes Should not be used (Unsuitable)

# Note:

When selecting the seal material, please consider the following suggestions carefully:

- 1. If there is no comment in the column of the fluid name, the condition of the fluid is under saturation at room temperature.
- 2. Please check with us for applications at a high fluid temperature or with different fluid concentrations.
- 3. For applications related to foods, please order separately specifing the detailed applications.

# **Body Material Selection Table**

The selection of appropriate body material for the Cupla is closely related to its usage application, the type of fluid run through, its concentration (%), the pressure, its working environment, etc. So the material must be carefully considered in order to use the Cupla efficiently and obtain its full performance. Since there are some body materials that should not be used with certain fluids, please refer to this table when making your selection.

#### **Taper Pipe Threads** JIS B 0203:1999 JSD 7-1:1994 (BS21)

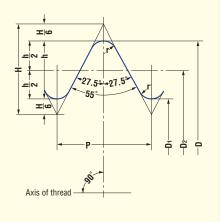

This Japanese Industrial Standard specifies taper pipe threads and is applicable to the threads used mainly for pressure-tight joints on the threads for joining pipes, pipe fittings, fluid machinery, etc.

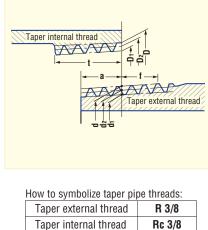

## Attached Table: Basic Profiles, Basic Dimensions and Tolerance

#### **Basic Profile Applied for Parallel Internal Threads**

Thick continuous line shows basic profile.

- $\mathbf{P} = \frac{25.4}{n} \qquad \begin{array}{l} \mathbf{H} = 0.960237 \text{ P} \\ \mathbf{h} = 0.640327 \text{ P} \\ \mathbf{h} = 0.640327 \text{ P} \end{array}$ 
  - **r** = 0.137278 P

## Thick continuous line shows basic profile.

$$\frac{25.4}{n} \qquad \begin{array}{l} \textbf{H} = 0.960491 \text{ P} \\ \textbf{h} = 0.640327 \text{ P} \\ \textbf{r} = 0.137329 \text{ P} \end{array}$$

# **Production Facilities That Assure Our Product Quality**

Large scale production facilities in Tochigi Prefecture, Japan and Ayutthaya, Thailand, having the capability of flexible mass production, are in full operation around the clock and constitute a complete high-grade supply system, from the machining of components to the assembly and testing of finished products, that is forever ready and able to respond to our user's reliance.

## **Production Facilities Assure Flexible Supply System**

## Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

In November 1995, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded Tochigi Nitto Kohki "ISO 9001" for quality control and quality assurance in the manufacture of Cupla products (Quick connect couplings) as well as 1kW or smaller Linear Drive air compressors, vacuum pumps and applied products, and in November 2001 "ISO 14001", also awarded International Standard for environment management systems intended to perform global environment preservation and pollution control.

# NITTO KOHKI INDUSTRY (THAILAND) CO., LTD.

Production of Cuplas, Air Compressors, and Vacuum Pumps

ISO 14001 & 9001

NITTO KOHKI INDUSTRY (THAILAND) CO., LTD. factory is accredited under ISO 14000 and ISO 9001.

# From Development to Production, Management and Marketing of "Cuplas"

Nitto Kohki has introduced the "integrated product assurance system" that can respond promptly to "users' requirements" by covering the range of development, quality control, production and marketing in order to ensure supply of high-performance high-quality "Cuplas".

## Nitto Kohki's Integrated Product Assurance System

## **Research and Development**

The needs of the time and the latest information are gathered and analyzed, and unique technology is utilized to the challenge for ceaseless developement of better Cuplas, Cuplas that suggest new applications.

# **Quality Control**

The careful selection of materials, painstaking pursuit of machining precision, and strict surveillance processes such as severe endurance tests have earned trust for our Cuplas as a global brand.

## **Production**

High-grade, rationalized, and integrated production system extends from the machining of parts to the assembly and testing of completed products. Robots that we make ourselves for our own plants and many other state-ofthe-art facilities that cannot be seen elsewhere have marvelous capacity for mass production. And with them all, we aim to be an establishment of a flexible supply system.

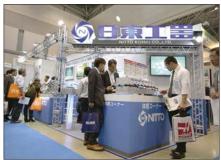

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

# Marketing

Meticulous marketing activities include advertising in the general industrial press and specialist papers, national and local exhibitions, training sessions, catalogs, promotion videos, other presentation tools and technical data sheets for new launches, and unique yet dynamic campaigns, etc.

# Nitto Kohki's Laborsaving Products

Nitto Kohki is capturing the needs of users by introducing to the world not only "Cuplas" quick connect couplings, but also nextgeneration laborsaving devices, including various "machine tools and hand tools", high precision "Delvo" electric screwdrivers, and linear-motor-driven piston "compressors/vacuum pumps".

## Nitto Kohki's Quality Products

# Machines and Tools to Achieve Energy and Labor Savings in Processing Work

Machines and tools are used at various processing sites for such work as cutting, polishing, scaling, drilling and chamfering of steel materials. We have created a product line up of pneumatic, electric and hydraulic machines and tools to match the diversification of processing modes and the conditions of work operations.

## High Precision "Delvo" Electric Screwdrivers for Professional Use

NITTO KOHKI "delvo" Electric Screwdrivers are high-quality tools for professional use, with special emphasis on precise control of torque and long life. They apply just the correct amount of torque –with sure, positive control always at your fingertips. They are smooth and shockless in operation, too.

# *Compressors, Vacuum Pumps and Their Applied Products*

MEDO pumps are unique products featuring a linear-motor-driven free piston system. NITTO KOHKI has made available a complete series of air compressors and suction pumps that incorporate this uniquely functional design. These are quite appropriate as air sources or suction power units for various pneumatically operated equipment and apparatus in advanced industries.

# Safety Guide

## Safety Precautions

The safety precautions provide instructions for the safe use of Nitto Cuplas to avoid the potential danger of bodily harm or damage to surrounding property. The safety precautions are categorized under the headings Danger, Warning and Caution, in accordance with the degree of potential hazard to the body or surrounding property, if the Cuplas are used incorrectly.

They are all important notes for safety and must be followed as well as in accordance with International standards #1 and other local safety regulations #2. #1: ISO 4413, Hydraulic Fluid Power – General rules relating to systems ISO 4414, Pneumatic Fluid Power – General rules relating to systems #2: Industrial Health & Safety law (for example)

🗥 DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**DANGER** Stop using the Cupla immediately if there is any anticipated danger of operation or reduced safety.

**WARNING** 

The enclosed safety precautions are only a guideline. When using Nitto Cuplas, you are requested to pay particular attention to possible hazardous situations for the application which are not stated in the safety precautions.

Indicates a potentially hazardous situation which, if not avoided, may result in personal injury or property damage.

# 🔨 Caution When Selecting Cuplas

### **DANGER**

- . Connection to a coupling of another brand may cause imperfect connection or disconnection, reduced air tightness, impaired pressure resistance or durability, reduced flow rate and potentially result in an unexpected accident and therefore must be avoided. Nitto Kohki cannot accept liability for any accident that may result by mixed use with the coupling of another brand. Please be sure to check for our marks on the right hand side of this page, which are always inscribed on Nitto Kohki Cupla products, when you order and nurchase
- . Do not use Cuplas under conditions and environments other than specified in the catalog.

## 🗥 WARNING

- Please consult us prior to use if Cuplas are required for use on machines, equipment or systems (hereafter referred to as "equipment, systems, etc.") for sustaining or controlling human life or body
- . When Cuplas are used for the purpose of ensuring safety, please consult us beforehand.
- The compatibility of the product with specific equipment, systems, etc. must be determined by the person designing the equipment, systems, etc. or the person who decides its specifications based on necessary analysis and test result. The expected performance and safety assurance of the equipment, systems, etc. will be the responsibility of the person who has determined its compatibility with the product.
- . If Cuplas are to be used for the following applications, please consult us:
- Vehicles, aircraft and associated equipment systems that accommodate people
- Medical facilities or suction equipment that directly affects human body
- Equipment that directly comes into contact with and runs food, drugs or medicines, drinking water, atomic energy equipment or equipment that ensures safety. Selecting the wrong type of seal material may cause a leak. In making your selection, please check the compatibility of the seal material with the type of fluid and temperature
- used in the application.
- Please consult us prior to selection or use of Cuplas when they are intended for use with corrosive or flammable gases/liquids and/or in atmospheres of these types of gases and liquids.

### Warranty and Disclaimer

#### Our responsibilities for the defects in our products shall be as follows:

- We shall be responsible for any defects in design, material or workmanship of our products, if it is apparent that such defects are due to reasons solely attributable to us. Our responsibilities shall be limited to one of the following, as determined by us:
- (a) repair of any defective products or parts thereof.
- (b) replacement of any defective products or parts thereof; or
- (c) compensation for loss and damages incurred by you, which shall in no case exceed the amount of your purchase price for the defective products.
- We shall in no case be liable for any special, indirect or consequential loss or damages, whether such loss or damages are those arising from work stoppage, impairment of
- other goods or death or personal injury.

## Performance, Dimensions and Its Limitation

Please note the performance charts and outside dimensions in this catalog do not take into account any tolerances found in mass production. The information is an average, to be a guide for selecting models and to enable technical appraisal by users.

#### Beware of Imitations

Recently, similar products which invite misidentification or confusion with Nitto Kohki Cuplas have appeared on the market.

- Connection with such a similar product to a Nitto Kohki Cupla may cause: 1. Imperfect connection or disconnection
- 2. Reduced air tightness
- 3. Impaired pressure resistance or durability 4. Reduced flow rate
- and could result in unexpected accidents.
- Therefore, connection other than with a Nitto Kohki Cupla must be avoided.

Please be sure to check for our original marks on the right hand side of this page, which are always inscribed on Nitto Kohki Cupla products, when you order and purchase.

Note: Nitto Kohki cannot accept any liability for any accident that may occur as a result of using couplings of another brand in conjunction with our own.

Markings

# Safety Guide

The following precautions must be taken when using Cuplas. Please contact Nitto Kohki or the outlet/supplier where you purchased the product with regard to repair procedures, certification on the specification or applications of the products.

## Precautions Relating to the Use of All Cuplas

#### Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

#### Cuplas for Low Pressure (Air)

#### ▲ Caution

- Only use Cuplas as quick connecting fluid couplings.
   The fluid to be used must be compatible with the body and seal material of Cupla
- Only use Cuplas with a combination of Nito Cuplas.
   Only use Cuplas with a combination of Nito Cuplas.
   Only use Cuplas continuously exceeding the rated working pressure.
   Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or
- deteriorate and cause leakage • Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas
- It may cause leakage or damage
- Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage
   May cause malfunction or leakage if paint sticks to Cuplas.
- · Do not disassemble Cuplas
- Disconnect the Cupla plug and socket while holding the plug in one hand and the socket in the other.
   After connection, try to pull the Cupla plug and socket apart to check secure connection. Selecting the wrong type of seal material may cause leakage. In making your selection, check the
- compatibility of seal and body material with the type of fluid and temperature. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas
- (Before cleaning, consult us.)
  Do not drop Cuplas. It may reduce the performance of the Cuplas.

- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
  Do not see Cuplas continuously at the lowest or highest working temperature.
  Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla
- for installation. It may cause thread damage. Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage
- · Dirt, scratches or damages on the sealing surface may cause leakage The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through
   filters before reaching to Cuplas.
- . Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage of
- malfunction. Consult us for an alternative way of releasing the residual pressure. Put a Nitto genuine dust cap on the plug after disconnection when there is a possibility of dirt sticking to the plug seal surface.

#### **Cautions on Handling Cupla Hose**

#### \Lambda Caution

- Make sure that there is no twist or bend on the hose before use
- Do not get the hose scratched or squeezed with stones or a concrete for a long time. It may cause leakage or damage.
- Do not bend the hose excessively near the Cupla.
  Do not use Cupla Hose as a hoist.
- . Do not use the hose near fire. It may soften or deform the hose.
- Keep the hose in a shaded, dry and well-ventilated place.
  Do not bend the urethane hose less than the minimum-bending radius of 3 cm
- . Disconnect a Cupla plug and socket while holding the plug in one hand and the socket in the other.
- After connection, try to pull the Cupla plug and socket apart to check secure connecti
- . In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas (Before cleaning, consult us.)
- Do not drop Cuplas. It may reduce the performance of the Cuplas
- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime

- Do not use Cuplas continuously at the lowest or highest working temperature.
  Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
  Dirt, scratches or damages on the sealing surface may cause leakage.
- The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filters before reaching to Cuplas.
- . Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage of malfunction. Consult us for an alternative way of releasing the residual pressure

#### Cupla for Oxygen / Fuel Gas

#### **Warning**

- Fluid must flow from socket to plug.
  Use a thread sealant on the male taper pipe thread to ensure no leakage Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla for installation. It may cause damage.
  The fluid to be used must be compatible with the body and seal materials of Cupla.
- Only use Cuplas with a combination of Nitto Cuplas.
  Do not use Cuplas continuously exceeding the rated working pressure
- . Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakage
- Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas It may cause leakage or damage.
- Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage.
   May cause malfunction or leakage if paint sticks to Cuplas.
- . Do not use the Cupla in a place where gas is likely to build up
- Do not connect or disconnect the Cupla near fire.
  Replace the Cupla with a new one if it caused a backfire.
- Never use any oil when assembling the Cupla to a hose. It may cause spontaneous fire.
- Out off the hose at least 3 cm from the end when the hose is re-used.
  Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or
- malfunction. Consult us for an alternative way of releasing the residual pressur

#### ▲ Caution

- . Only use Cuplas as quick connecting fluid couplings.
- Insert a hose right to the end of the hose barb and secure it tightly with hose clamps
   Keep Cuplas indoors away from water or moisture.
- . Do not use a hose with cracks. It may cause leakage or accidental disconnection
- Always check for leakage on Cuplas before use. Never use the Cupla with leak. Replace it with a new one.
   Make sure that the valve on the torch is closed before connecting a Cupla to the torch.
- . In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas
- (Before cleaning, consult us.) Do not drop Cuplas. Dropping may reduce reduce the performance of the Cuplas

- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
  Do not use Cuplas continuously at the lowest or highest working temperature.
  Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
- . Dirt, scratches or damages on the sealing surface may cause leakage • The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filters before reaching to Cuplas.

#### Mold Cupla / Flow Meter

#### \land Caution

- The fluid to be used must be compatible with the body and seal material of Cupla
   Do not use Cuplas continuously exceeding the rated working pressure.
- Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakage.
- . Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas
- Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage
- May cause malfunction or leakage if paint sticks to Cuplas.
  Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla for installation. It may cause thread damage.
- Do not use a hose with cracks. It may cause leakage or accidental disconnection.
   Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
   The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through
- filters before reaching to Cuplas. Do not disassemble Cuplas
- . Disconnect a Cupla plug and socket while holding the plug in one hand and the socket in the other.
- After connection, try to pull the Cupla plug and socket apart to check secure connection.
   Selecting the wrong type of seal material may cause leakage. In making your selection, check the compatibility of seal and body material with the type of fluid and temperature. As to the use of any special
- paint or solvent, make thoroughly sure of the material compatibility. In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas.
- (Before cleaning, consult us.)
- Do not drop Cuplas. It may reduce the performance of the Cuplas.
  Do not use Cuplas continuously at the lowest or highest working temperature.
  Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
- Dirt, scratches or damages on the sealing surface may cause leakage.
   Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or malfunction. Consult us for an alternative way of releasing the residual pressure.

## **Precautions Relating to the Use of All Cuplas**

#### Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

#### Cupla for Low Pressure (Water, Liquid) and for Medium Pressure

#### A Warning

- The fluid to be used must be compatible with the body and seal material of Cupla.
   Do not use Cuplas continuously exceeding the rated working pressure.
- Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakan
- Do not apply pressure to a Cupla socket or plug while they are disconnected
- Do not disassemble Cuplas.

#### ▲ Caution

- Use a thread sealant on the male taper pipe thread to ensure no leakage.
  Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla
- only use Cuplas as quick connecting fluid couplings.
  Only use Cuplas as quick connecting fluid couplings.
  Only use Cuplas with a combination of Nitto Cuplas. (Except Lever Lock Cupla)
- Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas. It may cause leakage or damage.
  Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage.
- May cause malfunction or leakage if paint sticks to Cuplas.
  Install a shut-off valve between the pressure source and Cuplas.
- · Do not use Cuplas as a swivel joint.
- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
   The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filters before reaching to Cuplas.
- Make sure that O-rings and Packing seals are lubricated at all times.
  Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or malfunction. Consult us for an alternative way of releasing the residual pressure Selecting the wrong type of seal material may cause leakage. In making your selection, check the
  compatibility of seal and body material with the type of fluid and temperature. As to the use of any special
- paint or solvent, make sure the compatibility thoroughly. In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas
- (Before cleaning, consult us.)
- Do not drop Cuplas. It may reduce the performance of the Cuplas.
  Do not use Cuplas continuously at the lowest or highest working temperature
- . Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
- Dirt, scratches or damages on the sealing surface may cause leakage.
   Put a Nitto genuine dust cap on the plug after disconnection when there is a possibility of dirt sticking to the plug seal surface.

#### Cuplas for High Pressure

#### 🕂 Warning

- . The fluid to be used must be compatible with the body and seal material of Cupla.
- Do not use Cuplas continuously exceeding the rated working pressure.
   Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or Do not connect or disconnect Cuplas while they are pressurized or residual pressure remains (Except HSP-PV type).
- Do not apply pressure to a Cupla socket or plug while they are disconnected.
  Do not disassemble Cuplas.

#### ▲ Caution

- . Use a thread sealant on the male taper pipe thread to ensure no leakage.
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla for installation. It may cause thread damage.
- Only use Cuplas as quick connecting full douplings.
  Only use Cuplas with a combination of Nitto Cuplas.
  Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas.
- It may cause leakage or damage. Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage
- · May cause malfunction or leakage if paint sticks to Cuplas.
- Install a shut-off valve between the pressure source and Cuplas.
  Do not use Cuplas as a swivel joint.
- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
- Do not use 280 Type Cupla with water glycol operating oil which could dissolve zinc plating
   Contact us when using Cuplas for high pressure gases.
- The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filters before reaching to Cuplas. • Make sure that O-rings and Packing seals are lubricated at all times.

- Do not flow fluid through Cuplas at the speed of more than 8 m/s.
   Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or matiunction. Consult us for an alternative way of releasing the residual pressure.
   Use a seal and body material suitable to the fluid referring to the pages of Seal Material and Body Material
- Selection Tables at the end of the catalog. In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas
- (Before cleaning, consult us.) Do not drop Cuplas. It may reduce the performance of the Cuplas.
- . Do not use Cuplas continuously at the lowest or highest working temperature
- Do not use objavny excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
  Dirt, scratches or damages on the sealing surface may cause leakage.
  Put a Nitto genuine dust cap on the plug after disconnection when there is a possibility of dirt sticking to the
- plug seal surface.

#### **Multi Cupla Series**

#### **Overall Multi Cuplas**

#### <u> Warning</u>

- Do not use Cuplas continuously exceeding the rated working pressure.
   Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakage.
   Do not disassemble Cuplas.

#### **∧** Caution

- . Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla
- Do not exceed the recommended maximum torque when screwing in to the male or remaile urreau or a cupia for installation. It may cause damage.
  Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas. It may cause leakage or damage.
  Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage.
  Only use Cuplas as quick connecting fluid couplings.
  Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
  The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filter before reaching the Cuplas.

- Ine inclusion of toreign matter in the full to be used may cause manufaction. Full must be cleaned through filters before reaching to Cuplas.
  Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or malfunction.
  Do not flow fluid through Cuplas at the speed of more than 8 m/s.
  Install a shut-off valve between the pressure source and Cuplas.
  Ohly use Cuplas with a combination of Nitto Cuplas.
  Check up on Cuplas periodically. Stop using Cuplas if malfunction is found.
  Calcetion the wares them effect for the market manufactor is found.

- Check up on Cuplas periodically. Stop using Cuplas if malfunction is found.
   Selecting the wrong type of seal material may cause leakage. In making your selection, check the
   compatibility of seal and body material with the type of fluid and temperature. As to the use of any special
   paint or solvent, make thoroughly sure of the material compatibility.
   In cleaning cuplas, do so in a manner that will not affect the seal and body material of Cuplas.
   (Before cleaning, consult us.)
   Do not use Cuplas continuously at the lowest or highest working temperature.
   Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
   Dirt, scratches or damages on the sealing surface may cause leakage.

#### МАМ Туре

- 🔥 Warning
- Do not drop Multi Cuplas. It may cause deformation of the plate.

#### **∧** Caution

- Make sure that the lever is in the "connect" position, and securely connect socket and plug.
   Do not force turning the lever. This may cause breakage.
   Install hoses symmetrically from the locking unit when they are connected to the Cuplas in order to distribute Use a thread sealant on the male taper pipe thread to ensure no leakage
  Make sure that 0-rings and Packing seals are lubricated at all times.
- MAM-A Type / MAM-B Type

#### <u> Warning</u>

Do not connect or disconnect Cuplas while they are pressurized or residual pressure of more than 0.6 MPa remains. It could lead to damage on the Cuplas.
Do not drop Multi Cuplas. It may cause deformation of the plate.

#### **∧** Caution

- Make sure that the lever is in the "connect" position, and securely connect socket and plug.
   Do not force turning the lever. This may cause breakage.
   When replacing a Cupla from the plate, carefully remove the C type retaining ring by using a pair of snap ring pliers. Make sure not to expand the C type retaining ring too much. It is recommended that a new C type retaining ring should be used when a Cupla is replaced.
- Install Cuplas symmetrically from the locking unit when they are connected to the plate in order to distribute Make sure that O-rings and Packing seals are lubricated at all times.

Do not apply pressure more than 2 MPa to a Cupla socket or plug while they are disconnected. It may cause
the valve to pop out.

Do not exceed more than 2 mm diameter for the axial eccentricity. It may cause leakage or breakage.
Do not exceed more than 0.5 degree for the angle of inclination during connection or disconnection. It may cause leakage or breakage.

Do not apply pressure more than 8 MPa to a Cupla socket or plug while they are disconnected. It may cause
the valve to pop out.

Do not exceed more than 2 mm diameter for the axial eccentricity. It may cause leakage or breakage.
 Do not exceed more than 0.5 degree for the angle of inclination during connection or disconnection. It may

cause leakage or breakage **∧** Caution

- Do not connect or disconnect sockets and plugs while they are pressurized.
  Match the lateral side of the hexagon shaped body part of the socket to that of the plug when they are connected.
  Do not exceed more than 0.6 mm diameter for the axial eccentricity when a socket and a plug are connected. It may cause leakage or breakage.

Do not connect MAT type each other since there is no allowance for eccentricity.
 Make sure that 0-rings and Packing seals are lubricated at all times.
 Do not drop Cuplas. It may reduce the performance of the Cuplas.

# Safety Guide

## Precautions Relating to the Use of All Cuplas

#### Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

#### Semicon Cupla Series

#### **∧** Caution

- Prior to an initial use, the seal material should be tested to confirm the material suitability for the fluid.
   Use a thread sealant on the male taper pipe thread to ensure no leakage.
- The 0-ring of a Cupla socket is normally greased to reduce the friction resistance (insertion load) that occurs
  when a plug is inserted to a socket. The Semicon Cupla, however, are grease-free Cuplas to prevent grease
  entering into fluid system. To reduce the friction resistance (insertion load) and protect the 0-ring, apply the small amount of the fluid to be run or pure water to the O-ring or the part of the plug where the O-ring comes in contact, before using.
- Small amount of fluid will spill out on the disconnection. In order to avoid any unexpected danger, drain the fluid inside the Cupla with compressed air before disconnection • Do not use Cuplas as a swivel joint.
- Only use Cuplas as quick connecting fluid couplings
- Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas
   It may cause leakage or damage.
- Do not apply pressure to a Cupla socket or plug while they are disconnected
- Be sure to mount a proper dust cap while Cuplas are left disconnected
   Do not disassemble Cuplas.
- Selecting the wrong type of seal material may cause leakage. In making your selection, check the compatibility of seal and body material with the type of fluid and temperature. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- . In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas
- (Before cleaning, consult us.)
   Do not drop Cuplas. It may reduce the performance of the Cuplas.
- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
   Do not use Cuplas continuously at the lowest or highest working temperature.
- . Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
- Dirt, scratches or damages on the sealing surface may cause leakage.
   The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through
- filters before reaching to Cuplas. Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or malfunction. Consult us for an alternative way of releasing the residual pressure.

#### Paint Cupla

#### 🛝 Warning

- Do not use Cuplas continuously exceeding the rated working pressure
- Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakage
- The fluid to be used must be compatible with the body and seal material of Cupla.
- Check the compatibility of the seal and body material with the type of fluid and temperature before use. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
   Make sure that a hose containing a ground wire is connected to a ground. Insufficient grounding may lead to
- fire or dangerous explosion caused by possible sparks of static electricity. Wear appropriate clothes and protective equipment such as safety glasses, face guard and gloves at all time Otherwise it could be potentially hazardous when paint or solvent splashes on to operators · Do not disassemble Cuplas.

#### 🗥 Caution

- This Cupla is designed for paints diluted by solvents. Do not use this Cupla for any other application
- . Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla
- for installation. It may cause dam . Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas
- It may cause leakage or damage. Do not use Cuplas as a swivel joint
- . The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filters before reaching to Cuplas. • Install a shut-off valve between the pressure source and Cuplas
- . Do not connect other maker's plug to our socket. It could cause leakage or damage on the Cuplas.
- Only use Cuplas with a combination of Nito Cuplas.
  Be careful with the fluid that will spill out from the plug when disconnected.
- Clean Cuplas each time after use. Otherwise paint will dry out and may cause malfunction, insufficient color
- mix or poor grounding. Check up on Cuplas periodically. Stop using Cuplas if malfunction is found.

- Fluid must flow from socket to plug.
  Do not drop Cuplas. It may reduce the performance of the Cuplas.
  Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
- Do not use Cuplas continuously at the lowest or highest working temperature.
   Do not apply any excessive bending, tension or rotation to Cuplas. This may cause leakage or damage.
   Dirt, scratches or damages on the sealing surface may cause leakage.

**Cupla for Inert Gas** 

#### 🔥 Warning

- Do not use Cuplas continuously exceeding the rated working pressure.
   Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakage
- Do not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas.
- It may cause leakage or damage . Do not connect or disconnect Cuplas while they are pressurized or residual pressure remains
- Do not disassemble Cuplas

#### **Caution**

- . Use a thread sealant on the male taper pipe thread to ensure no leakage
- The fluid to be used must be compatible with the body and seal material of Cupla.
   Only use Cuplas as quick connecting fluid couplings.

- Only use Cuplas with a combination of Nitto Cuplas.
   Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage.
- May cause malfunction or leakage if paint sticks to Cupla
- Install a shut-off valve between the pressure source and Cuplas.
  Do not use Cuplas as a swivel joint. . Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime
- Selecting the wrong type of seal material may cause leakage. In making your selection, check the
  compatibility of seal and body material with the type of fluid and temperature. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility
- In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas
   Do not drop Cuplas. It may reduce the performance of the Cuplas.

- Do not use Cuplas continuously at the lowest or highest working temperature.
  Do not exceed the recommended maximum torque when screwing in to the m for installation. It may cause thread damage. male or female thread of a Cupla
- Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage
- Drit, scratches or damages on the sealing surface may cause leakage.
   The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through
- filters before reaching to Cuplas. Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or nalfunction. Consult us for an alternative way of releasing the residual pressure.
- · Put a Nitto genuine dust cap on the plug after disconnection when there is a possibility of dirt sticking to the plug seal surface.

#### Semi-Standard Cupla Series

#### <u> Caution</u>

- · Only use Cuplas as quick connecting fluid couplings
- The fluid to be used must be compatible with the body and seal material of Cupla.
   Only use Cuplas with a combination of Nitto Cuplas.
- · Do not use Cuplas continuously exceeding the rated working pressure
- Only use Cuplas within the range of the rated temperature. Otherwise the seal may get damaged or deteriorate and cause leakage.
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of a Cupla To not apply any excessive impact, bend or tension more than is necessary to connect or disconnect Cuplas
- It may cause leakage or damage
- Do not connect Cuplas directly to a vibrating or impact device. It may result in reduced lifetime.
  Do not use Cuplas in a place where dust or metal dust gets in. It may cause malfunction or leakage
- . May cause malfunction or leakage if paint sticks to Cuplas. Do not disassemble Cuplas
- Selecting the wrong type of seal material may cause leakage. In making your selection, check the compatibility of seal and body material with the type of fluid and temperature. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility. • In cleaning Cuplas, do so in a manner that will not affect the seal and body material of Cuplas.

- (Before cleaning, consult us.) Do not drop Cuplas. It may reduce the performance of the Cuplas. Do not use Cuplas continuously at the lowest or highest working temperature.
- Do not apply any excessive bending, tension or rotation to Cuplas. It may cause leakage or damage.
   The inclusion of foreign matter in the fluid to be used may cause malfunction. Fluid must be cleaned through filters before reaching to Cuplas
- . Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It may cause leakage or

# Maintenance of Cuplas

Cuplas should be inspected periodically to ensure safe operation and to prevent them from a performance drop or malfunction. If there is a malfunction in the Cupla or wear and tear, please replace it with a new one. If you have any concerns, contact Nitto Kohki or the distributor from whom you purchased your Cupla.

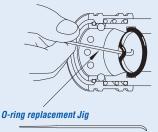

## O-ring Replacement Procedure

The internal O-ring is a consumable item. If the O-ring in the socket has failure such as wear and tear or deterioration, take the following steps to replace it with a new one. Always use genuine Nitto O-rings.

### How to Remove the O-ring

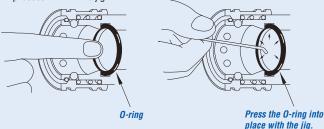

Use an optional O-ring replacement Jig to remove the O-ring. Be careful not to damage the groove of O-ring with the jig. Used O-rings with wear and tear or deterioration can be removed easily with the jig.

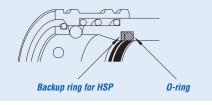

2 After removing the O-ring, wipe the groove clean with a cloth.

### How to Install a New O-ring

• After making sure that no dust or foreign matter exists in the groove of O-ring, push in part of the O-ring and the remaining part can be easily pressed in with the jig.

A HSP Cupla has a backup ring. Insert an O-ring in the place shown in the figure. If Cupla connection/disconnection is hard and not smooth after the O-ring has been replaced, apply a little grease to the O-ring.

# 🕂 Caution for Storing Cuplas

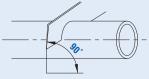

- Store Cuplas in a place where no dust or foreign matter gets in. If fluid flows while the dust or foreign matter is present inside Cuplas, the dust or foreign matter may go into the equipment connected to the Cupla and may cause malfunction.
- Store Cuplas indoors away from water or moisture.
- Store Cuplas in a shaded, dry and well-ventilated place.
- Do not to drop Cuplas. It will deform or damage Cuplas.
- If Cuplas are stored or not being used for a long period of time, check their appearance, function and performance before use.

## Semicon Cupla <u>SCF Type (See page 124)</u>

## How to install a tube to the socket

### 1 Cut the tube

Cut the tube (PFA) as shown below with a box-cutter or a knife.

#### <sup>2</sup> Groove the tube

Insert the tube completely into the special jig (see the below figure.) and keep the jig's cutter blade pressed down while the tube is rotated about one and a half turns. It will give you a complete groove on the tube which is good for a ferrule mount. Special jigs to suit different tube sizes are available as indicated below.

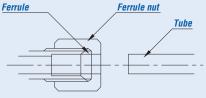

Special jigs

opoolai jigo		
Socket type	Tube size	Jig Model No.
SCF-2SL-N08	ø8 × ø6	T-8
SCF-3SL-N10	ø10 × ø8	T-10

Please contact us for purchasing the jigs.

### 3 Inserting the tube

Insert the grooved tube firmly into the Cupla. In this procedure, be careful not to take out the ferrule nut.

Note Ferrule position (taper facing towards Cupla)

#### **4** Tightening the nut

After lightly tightening the ferrule nut with your fingers, turn it another one and a half turns with a spanner. Be careful not to overtighten.
